Ryan,Hal Turton,2008-01-01 Transport and in particular road transport represents a significant global threat to long term sustainable development and is one of the fastest growing consumers of final energy and sources of greenhouse gas emissions In this book long term energy economy environment scenarios are used to identify the key technological developments required to address the challenges passenger car transport poses to climate change mitigation and energy security It also considers possible targets for policy support and examines some of the elements that contribute to the significant levels of uncertainty particularly social and political conditions The book then builds on this long term scenario analysis with a broad review of recent empirical examples of relevant policy implementation to identify near term options for the passenger transportation sector which may promote a shift towards a more sustainable transport system over the longer term Sustainable Automobile Transport will be of particular interest to those in the policy process who are striving to address the automobile derived challenges associated with climate change a growing rather than declining problem It will have a worldwide audience as every developed and rapidly growing society struggles to address the dynamic growth in greenhouse gas emissions from automobiles **Federal Register** ,2012-10 *Handbook of Injury and Violence Prevention* Lynda Doll,E. Vehicle Fuel Economy , Outgrowing the Earth Lester R. Brown, 2012 Historically food security was the responsibility of ministries of agriculture but today that has changed decisions made in ministries of energy may instead have the greatest effect on the food situation Recent research reporting that a one degree Celsius rise in temperature can reduce grain yields by 10 per cent means that energy policy is now directly affecting crop production Agriculture is a water intensive activity and while public attention has focused on oil depletion it is aquifer depletion that poses the more serious threat There are substitutes for oil but none for water and the link between our fossil fuel addiction climate change and food security is now clear While population growth has slowed over the past three decades we are still adding 76 million people per year In a world where the historical rise in land productivity has slowed by half since 1990 eradicating hunger may depend as much on family planners as on farmers The bottom line is that future food security depends not only on efforts within agriculture but also on energy policies that stabilize climate a worldwide effort to raise water productivity the evolution of land efficient transport systems and population policies that seek a humane balance between population and food Outgrowing the Earth advances our thinking on food security issues that the world will be wrestling with for years to come Interim Report on the Administrative Law, Process and Procedure Project for the 21st Century United States.
