Unit 8 – Introduction to Equilibrium

The equilibrium constant for the gas phase reaction above is 95 at 25°C. What is the value of the equilibrium constant for the following reaction at 25°C?

Reversed
+ Doubled

(A) 95²

(B) 95

(C) (95)^{1/2}(D) $\frac{1}{95}$ (E) $\frac{1}{(95)^2}$ 

$C_2H_2(g)$ is reduced by $H_2(g)$ in the presence of a solid platinum catalyst, as represented by the equation above. Factors that could affect the rate of the reaction include which of the following?

- I. Changes in the partial pressure of $H_2(g)$
- II. Changes in the particle size of the platinum catalyst
- III. Changes in the temperature of the reaction system

(A) III only

(B) I and II only

(C) I and III only

(D) II and III only

(E) I, II, and III

A sealed rigid vessel contains $BaO_2(s)$ in equilibrium with $BaO(s)$ and $O_2(g)$ as represented by the equation above. Which of the following changes will increase the amount of $BaO_2(s)$ in the vessel?

(A) Removing a small amount of $O_2(g)$ $R \times$ (B) Removing a small amount of $BaO(s)$ X (C) Adding He gas to the vessel X (D) Lowering the temperature L

2. For which of the following reaction mixtures at equilibrium would reducing the volume of the container at constant temperature cause the equilibrium to shift toward the products?

increase P°

shift towards fewer
+ make gas

When 4.00 mol each of $X(g)$ and $Y(g)$ are placed in a 1.00 L vessel and allowed to react at constant temperature according to the equation above, 6.00 mol of $Z(g)$ is produced. What is the value of the equilibrium constant, K_c ?

(A) 3

(B) 6

(C) 8

(D) 16

(E) 36

6. The synthesis of $CH_3OH(l)$ from $CO(g)$ and $H_2(g)$ is represented by the equation above. The value of K_c for the reaction at 483 K is 14.5.

increase heat shifts left, decrease K_c

Which of the following explains the effect on the equilibrium constant, K_c , when the temperature of the reaction system is increased to 650 K?

(A) K_c will increase because the activation energy of the forward reaction increases more than that of the reverse reaction.(B) K_c will increase because there are more reactant molecules than product molecules.(C) K_c will decrease because the reaction is exothermic.(D) K_c is constant and will not change.

Tyring, 2008-11-05 Dermatologists are being asked to understand the pathophysiology of a number of immune mediated skin diseases In addition a number of new products have appeared on the market during the past decade which requires an understanding of the mechanisms of action of these drugs Dermatologists however have no easily understood book to which they can refer to regarding the disease or the drug Handbook of Cell Signaling Ralph A. Bradshaw, Edward A. Dennis, 2009-11-03 Handbook of Cell Signaling Three Volume Set 2e is a comprehensive work covering all aspects of intracellular signal processing including extra intracellular membrane receptors signal transduction gene expression translation and cellular organotypic signal responses The second edition is an up to date expanded reference with each section edited by a recognized expert in the field Tabular and well illustrated the Handbook will serve as an in depth reference for this complex and evolving field Handbook of Cell Signaling 2 e will appeal to a broad cross disciplinary audience interested in the structure biochemistry molecular biology and pathology of cellular effectors Contains over 350 chapters of comprehensive coverage on cell signaling Includes discussion on topics from ligand receptor interactions to organ organism responses Provides user friendly well illustrated reputable content by experts in the field

Transduction Mechanisms in Cellular Signaling Edward A. Dennis, Ralph A. Bradshaw, 2011-04-12 Cell signaling which is also often referred to as signal transduction or in more specialized cases transmembrane signaling is the process by which cells communicate with their environment and respond temporally to external cues that they sense there All cells have the capacity to achieve this to some degree albeit with a wide variation in purpose mechanism and response At the same time there is a remarkable degree of similarity over quite a range of species particularly in the eukaryotic kingdom and comparative physiology has been a useful tool in the development of this field The central importance of this general phenomenon sensing of external stimuli by cells has been appreciated for a long time but it has truly become a dominant part of cell and molecular biology research in the past three decades in part because a description of the dynamic responses of cells to external stimuli is in essence a description of the life process itself This approach lies at the core of the developing fields of proteomics and metabolomics and its importance to human and animal health is already plainly evident Provided by publisher *RAS Family GTPases* Channing Der, 2007-04-29 Since 1982 Ras proteins have been the subject of intense research investigation by the biomedical research community The wide interest in Ras has been stimulated for three key reasons This book features chapters contributed by leading investigators in the field that highlight the current state of the art in Ras biochemistry structure and biology This book is an excellent reference for students in the biomedical sciences and for investigators in the field Science In Medicine Ushma S. Neill, American Society for Clinical Investigation, 2007-10-31 Science in Medicine The JCI Textbook of Molecular Medicine is a collection of acclaimed articles published in the Journal of

Clinical Investigation during the Journal's tenure at Columbia University The society that publishes the JCI the American Society for Clinical Investigation ASCI is an honor society of physician scientists representing those who are at the forefront of translating findings in the laboratory to the advancement of clinical practice This textbook brings together state of the art reviews written by the world's leading authorities including many ASCI members The reviews examine the molecular mechanisms underlying a wide array of diseases and disorders affecting all major organ systems The fundamentals of the organ or physiological systems in question are present alongside the underlying genetic or physiological abnormalities that result in disease This text illustrates the translation of basic scientific knowledge into the current practice of clinical medicine The reviews provide an authoritative and comprehensive overview by building on known scientific concepts and treatment of human disease while exploring where these advances might take medicine over the next decade The book is a valuable resource for medical students graduate students house staff attending and practicing physicians and biomedical researchers
