M. de Waal, Pier Francesco Ferrari, 2012-01-02 Monkey see monkey do may sound simple but how an individual perceives and processes the behavior of another is one of the most complex and fascinating questions related to the social life of humans and other primates In The Primate Mind experts from around the world take a bottom up approach to primate social behavior by investigating how the primate mind connects with other minds and exploring the shared neurological basis for imitation joint action cooperative behavior and empathy In the past there has been a tendency to ask all or nothing questions such as whether primates possess a theory of mind have self awareness or have culture A bottom up approach asks rather what are the underlying cognitive processes of such capacities some of which may be rather basic and widespread Prominent neuroscientists psychologists ethologists and primatologists use methods ranging from developmental psychology to neurophysiology and neuroimaging to explore these evolutionary foundations A good example is mirror neurons first

discovered in monkeys but also assumed to be present in humans that enable a fusing between one's own motor system and the perceived actions of others. This allows individuals to read body language and respond to the emotions of others, interpret their actions and intentions, synchronize and coordinate activities, anticipate the behavior of others and learn from them. The remarkable social sophistication of primates rests on these basic processes which are extensively discussed in the pages of this volume.

Extractive Industries and Ape Conservation Arcus Foundation, 2014-03-27 Rigorously and objectively examines the evolving context within which great ape and gibbon habitats are increasingly interfacing with extractive industries.

Philosophy of Complex Systems, 2011-05-23 The domain of nonlinear dynamical systems and its mathematical underpinnings has been developing exponentially for a century, the last 35 years seeing an outpouring of new ideas and applications and a concomitant confluence with ideas of complex systems and their applications from irreversible thermodynamics. A few examples are in meteorology, ecological dynamics and social and economic dynamics. These new ideas have profound implications for our understanding and practice in domains involving complexity, predictability and determinism, equilibrium, control, planning, individuality, responsibility and so on. Our intention is to draw together in this volume what we believe for the first time is a comprehensive picture of the manifold philosophically interesting impacts of recent developments in understanding nonlinear systems and the unique aspects of their complexity. The book will focus specifically on the philosophical concepts, principles, judgments and problems distinctly raised by work in the domain of complex nonlinear dynamical systems, especially in recent years. Comprehensive coverage of all main theories in the philosophy of Complex Systems. Clearly written expositions of fundamental ideas and concepts. Definitive discussions by leading researchers in the field. Summaries of leading edge research in related fields are also included.

The work helps readers understand the different viewpoints of animal welfare advocates who want to improve conditions for animals and animal rights activists who don't want animals used at all.

Cooperation and Its Evolution Kim

Sterelny, Richard Joyce, Brett Calcott, Ben Fraser, 2024-08-06 Essays from a range of disciplinary perspectives show the central role that cooperation plays in structuring our world This collection reports on the latest research on an increasingly pivotal issue for evolutionary biology cooperation The chapters are written from a variety of disciplinary perspectives and utilize research tools that range from empirical survey to conceptual modeling reflecting the rich diversity of work in the field They explore a wide taxonomic range concentrating on bacteria social insects and especially humans Part I Agents and Environments investigates the connections of social cooperation in social organizations to the conditions that make cooperation profitable and stable focusing on the interactions of agent population and environment Part II Agents and Mechanisms focuses on how proximate mechanisms emerge and operate in the evolutionary process and how they shape evolutionary trajectories Throughout the book certain themes emerge that demonstrate the ubiquity of questions regarding cooperation in evolutionary biology the generation and division of the profits of cooperation transitions in individuality levels of selection from gene to organism and the human cooperation explosion that makes our own social behavior particularly puzzling from an evolutionary perspective Bradford Books imprint

Towards a Theory of Thinking Britt Glatzeder, Vinod Goel, Albrecht Müller, 2010-03-20 What is Thinking Trying to Define an Equally Fascinating and Elusive Phenomenon Human thinking is probably the most complex phenomenon that evolution has come up with until now There exists a broad spectrum of definitions from subsuming almost all processes of cognition to limiting it to language

based sometimes even only to formalizable reasoning processes We work with a medium sized definition according to which thinking encompasses all operations by which cognitive agents link mental content in order to gain new insights or perspectives Mental content is thus a prerequisite for and the substrate on which thinking operations are executed The largely unconscious acts of perceptual object stabilization categorization emotional evaluation and retrieving all the above from memory inscriptions are the processes by which mental content is generated and are therefore seen as prerequisites for thinking operations In terms of a differentia specifica the notion of thinking is seen as narrower than the notion of cognition and as wider than the notion of reasoning Thinking is thus seen as a subset of cognition processes and reasoning processes are seen as a subset of thinking Besides reasoning the notion of thinking includes also nonexplicit intuitive and associative processes of linking mental content According to this definition thinking is not dependant on language i e also many animals and certainly all mammals show early forms of thinking

Dynamic Coordination in the Brain Christoph von der Malsburg, William A. Phillips, Wolf Singer, 2010 Nervous systems do not live by the rate code alone The ceaseless activities of groups of neurons are choreographed into waves oscillations synchronized rhythms and transient coalitions it is these that underlie behavior memory and conscious perception This exuberant manifesto masterfully summarizes and reflects upon the relevant evidence of these patterns from all manner of brains small and large

The Evolution of Primate Societies John C. Mitani, Josep Call, Peter M. Kappeler, Ryne A. Palombit, Joan B. Silk, 2012-10-24 In 1987 the University of Chicago Press published Primate Societies the standard reference in the field of primate behavior for an entire generation of students and scientists But in the twenty five years since its publication new theories and research techniques for studying the Primate order have been developed debated and tested forcing scientists to revise their understanding of our closest living relatives Intended as a sequel to Primate Societies The Evolution of Primate Societies compiles thirty one chapters that review the current state of knowledge regarding the behavior of nonhuman primates Chapters are written by the leading authorities in the field and organized around four major adaptive problems primates face as they strive to grow maintain themselves and reproduce in the wild The inclusion of chapters on the behavior of humans at the end of each major section represents one particularly novel aspect of the book and it will remind readers what we can learn about ourselves through research on nonhuman primates The final section highlights some of the innovative and cutting edge research designed to reveal the similarities and differences between nonhuman and human primate cognition The Evolution of Primate Societies will be every bit the landmark publication its predecessor has been
