Modeling of coal gasification for fuel cell utilization M. L. Finson, United States. Department of Energy. Division of Fossil Fuel Utilization, 1978 This report summarizes recent progress on a DOE supported program to construct computer models for potential future combined coal gasification fuel cell power generation systems The approach is to develop physically well founded descriptions for the performance of both molten carbonate fuel cells and coal gasifiers and to utilize the models to prepare performance maps for each device enabling selection of the optimum interfaces between fuel cells and gasifiers In a previous phase of the study we identified entrained flow gasification as the most appropriate type for providing fuel cell feed gas on the basis of off gas composition and the ability to handle a wide range of coal types Accordingly a substantial portion of the current effort is concerned with the development of a computer model for entrained flow gasifiers Furthermore several scaling laws have been developed for fuel cell performance Mostly based on equilibrium open circuit considerations to date these address such issues as the requirements for avoiding carbon deposition the potential effects of methane conversion and the distribution of heat sources and sinks within the cell
