## The Fetal Skeleton

1. Are the same skull bones seen in the adult also found in the fetal skull? Yes
2. How does the size of the fetal face compare to its cranium? Face is foreshortened, overshadowed by the large cranium. Maxillae and mandible are very tiny.

How does this compare to the adult skull? In the adult the cranium is proportionately smaller and the facial bones are proportionately larger and more prominent.

3. What are the outward conical projections on some of the fetal cranial bones? These are ossification (growth) centers.
4. What is a fontanel? A fibrous membrane connecting fetal skull bones.
- What is its fate? Progressively ossified; replaced by a suture.
- What is the function of the fontanels in the fetal skull? Allow fetal skull to be compressed slightly during birth passage; allow for fetal (and infant) brain growth.

5. Describe how the fetal skeleton compares with the adult skeleton in the following areas:

cranium: In the fetus, with the anterior fontanelles different and somewhat present.

mandibles: In the fetus the teeth, dentures, and molars are separate bones. In the adult they form the jaw bones which unite at joint lines.

scapula and clavicle: Not ossified in the fetus.

ribs: The cartilaginous parts are not fused to the sternum.

basal bones: Absent or rudimentary in the fetus, absent in the adult.

pelvis: May be absent in the fetus. Epiphysis is ossified.

vertebrae: Cartilaginous intervertebra, fibrous, ossified vertebrae not fused together in the fetus.
