Stouthamer, 2012-12-06 Application of recent advances such as non equilibrium thermodynamics the maintenance concept and the material balancing method to the description of microbial growth has suggested new experimental approaches which have yielded a wealth of data These data have been used to develop mathematical models of microbial growth and metabolism and the models have made it possible to direct the metabolism of a microorganism in such a way that more of a certain desired product is made While a full quantitative description of all aspects of microbial growth and metabolism is still remote the new approaches are opening up large areas of new potential it is now possible for instance to deal with individual cells in a population and with quantitative aspects of product formation and optimisation Microbiologists biochemists and physiologists will find this an invaluable update on a field of great promise [NEET PG - Forensic Medicine and Toxicology \(Question Bank 3300 MCQs\)](#)
