Prentice-Hall Earth Science Charles R. Coble, 1986 Prentice Hall Earth Science, 1988 **Environmental Chemistry** Stanley Manahan, Stanley E. Manahan, 2009-12-17 The field of environmental chemistry has evolved significantly since the publication of the first edition of *Environmental Chemistry*. Throughout the book's long life it has chronicled emerging issues such as organochloride pesticides, detergent phosphates, stratospheric ozone depletion, the banning of chlorofluorocarbons, and greenhouse warming. D **Environmental Science and Technology** Stanley E. Manahan, 1997-08-26 This broad overview covers the four traditional spheres of the environment: water, air, earth, and life, and introduces a fifth sphere, the anthrosphere, which the author defines as the sphere of human activities, especially technology, that affect the earth. *Environmental Science and Technology* is organized into six major areas: one for each of the five spheres and one introductory section that explains the fundamentals of chemistry, biology, biochemistry, and environmental chemistry. Throughout the book, the relationships among the five spheres and their connections to the sciences are emphasized. For better or worse, technology is closely intertwined with the other four spheres. Humans utilize resources, manufacture goods, practice agriculture, and engage in other activities that have profound effects on the planet. This unique text/reference takes a realistic look at the environmental effects of human activities and shows how constructively directed technology can have a beneficial effect on the Earth. **Resources for Teaching Middle School Science** Smithsonian Institution, National Academy of Engineering, National Science Resources Center of the National Academy of Sciences, Institute of Medicine, 1998-04-30 With age-appropriate inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. *Resources for Teaching Middle School Science*, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of *Resources for Teaching Elementary School Science*, the first in the NSRC series of annotated guides to hands-on inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area: Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type: core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved, and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content

standards on which these curriculum pieces focus In addition to the curriculum chapters the guide contains six chapters of diverse resources that are directly relevant to middle school science Among these is a chapter on educational software and multimedia programs chapters on books about science and teaching directories and guides to science trade books and periodicals for teachers and students Another section features institutional resources One chapter lists about 600 science centers museums and zoos where teachers can take middle school students for interactive science experiences Another chapter describes nearly 140 professional associations and U S government agencies that offer resources and assistance Authoritative extensive and thoroughly indexed and the only guide of its kind Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers school administrators teacher trainers science curriculum specialists advocates of hands on science teaching and concerned parents

Nature-Based Solutions for Urban Water Management Junguo Liu,Zhan Tian,Qinhua Ye,Laixiang Sun,Shiqiang Wu,2024-02-23 Water plays an essential role in the development and functioning of a city but could also be a key risk factor for urban pluvial flooding which may occur more frequently in the context of future climate change The traditional means of flood risk management relied heavily on engineering measures or the use of gray infrastructure Recently there has been a call to integrate nature based solutions NBS which make use of natural processes and ecosystem services with conventional engineering approaches NBS infrastructures and designs pay great attention to ecosystem services considerations in assessing their induced hydrological processes as well as in managing the stormwater and mitigating urban flood and droughts Nevertheless compared with grey infrastructure larger space could be demanded for NBS while the buffer effect for NBS in extremes events is still uncertain for evaluation

Interdisciplinary Environmental Solutions Barnali Dixon,2025-07-02 This textbook presents a clear and accessible argument for sustainable planning and development The book discusses multiple environmental issues and examines how potential solutions can and should be addressed in the context of space and place The book also offers an invaluable discussion on the need for a framework for system based thinking where various disciplines should work together to find innovative solutions Students are provided with an appreciation of the need for an interdisciplinary approach to these issues combined with an underlying sense of space an appreciation of cultural diversity and differences as well as associated insights into human relationships These core attributes put space at the heart of environmental and natural resources management in terms of policy planning and on the ground initiatives This book will be an invaluable reference for advanced undergraduate graduate students and researchers working in the field looking for an accessible overview of this interdisciplinary approach to the topic
