Taneja,2016-06-23 Many business sectors have been and are being forced to compete with new competitors disrupters of some sort who have found new ways to create and deliver new value for customers often through the use of technology that is coupled with a new underlying production or business model and or a broad array of partners including in some cases customers themselves Think about the disruption created by Apple by the introduction of the iPod and iTunes and by Netflix within the entertainment sectors using partners within the ecosystem think of Uber that didn t build an app around the taxi business but rather built a mobility business around the app to improve customer experience Airline Industry considers whether the airline industry is poised for disruptive innovations from inside or outside of the industry Although airlines have a long history of continuous improvements and innovation few of their innovations can be classified as disruptive innovations The few disruptive innovations that did emerge were facilitated for example by new technology jet aircraft and government policy deregulation Now there are new forces in play customers who expect to receive products that are more personalized and experience based throughout the entire journey new customer interfaces via social media advanced information systems and analytics financially powerful airlines based in emerging

nations and the rise of unencumbered entrepreneurs who think differently as well as platform focused integrators

Taneja, 2022-09-29 Unprecedented social changes accelerated by facilitating technologies and the COVID 19 pandemic are calling for airlines to think deeply and non conventionally on what will be important to existing and new travelers as they change their lifestyles New thinking requires airlines to extend the boundaries of their businesses to go beyond their traditional domains This need goes beyond the renovation and iteration of conventional products to the transformation of products requiring new ideas and ways to scale them Examples include the development of cost effective urban air mobility intermodal passenger transportation door to door travel that is sustainable and personalized offers Airimagination Extending the Airline Business Boundaries raises some thought provoking questions and provides a direction for practical solutions For example what if airlines developed products and services that finally meet end to end needs of customers seamlessly by collaborating in the value adding open ecosystems using platforms that facilitate effective engagement with both digital and nondigital customers and employees in real time and at each touch point Ironically the current time is an advantage for some airlines as they already have had to deal with a deep and wide disruption caused by the pandemic leading operations to start from ground zero This book the latest in a long and well regarded series by Nawal K Taneja explores innovative best practices within the airline business world complemented by numerous insightful perspectives contained in multiple forewords and thought leadership pieces This book is aimed primarily at high level practitioners within the airline industry and related businesses **The Amazon** Roger Harris, Peter Hutchison, 2007 This new edition has been completely revised with updated information on hotels lodges and tour operators It contains a detailed and illustrated natural history section on native species and habitats The Amazon is an ideal location for eco travellers naturalists sports enthusiasts and explorers Travellers are given sound advice on responsible travel and planning their own expedition *Intelligent Retail* Gerri Heinemann, 2022-10-13 This book shows stationary retail a way to reinvent itself after Corona in order to be able to survive against the strong competition of online retail The focus is on the central issues that will

shape the retail of the future For example brick and mortar retail in particular must now work with intelligent systems based on data and adopt or even surpass methods that the large online marketplaces have been using successfully for a very long time In this regard artificial intelligence also plays a major role in retail This is not just about automation and robots taking over tasks but also about instruments and machines being able to learn and draw conclusions themselves in all retail functions This is becoming increasingly difficult because our shopping and search behavior is constantly changing Therefore a customer should receive intelligent recommendations in the store which are also based on his already known interests and behavior patterns Gerrit Heinemann shows how intelligent action can save stationary retail in city centres and shopping centres The content From stationary Retail to intelligent Retail Threats to the stationary retail trade Basic requirements and manifestations of intelligent Retail Examples of intelligent retail of the future Risks for intelligent Retail *Re-platforming the Airline Business* Nawal K. Taneja,2019-01-10 Airline business models continue to be shaped by powerful forces relating to customers complexities and regulators However at the same time there are emerging technologies that can help airlines cater to the needs of their changing customer bases and manage the complexities of the business In his previous books Nawal Taneja has deliberated on these forces and how the airline industry is poised for disruptive change that could come from within or outside of the industry He also discussed the point that the airline planning systems and process in use are neither contemporary nor sufficiently integrated to meet the changing needs of customers who now are looking for outcomes not products In *Re platforming the Airline Business To Meet Travelers Total Mobility Needs* Taneja not only reiterates the need for transformation of the airline business but provides a map of the transformational process This book proposes that different sectors of the aviation industry particularly airlines and airports should consider using not just a wide array of technologies Artificial Intelligence biometrics blockchain and the Internet of Things but also specifically designed customer centric platforms to make informed decisions and to develop and implement transformative strategies to meet travelers total mobility needs These technologies and platforms can enable airlines and airports to achieve scale and scope as well as agility and flexibility through strategic partnerships to offer intelligently aggregated travel related services right now Subsequently they will enable various members in the travel chain to provide solutions to travelers global mobility requirements effectively and with better experiences **Digital Pricing** Frank Frohmann,2023-03-03 This is one of the first books to combine the current megatrend of digitalization and pricing as the most effective lever for increasing and sustaining profits The book presents the basics of digital pricing as well as modeling methods and implementation examples This structure helps in tackling the latest developments and challenges due to digitalization Readers will gain a detailed insight into using innovative revenue and price models to generate a sustainable competitive advantage for their companies The author uses his cross industry experience to draw on several examples of innovative digital pricing approaches which can be applied in industrial sectors such as automotive industrial goods and machinery as well as service sectors like telecommunications
