Concrete Planet Robert Courland, 2022-06-21 Concrete We use it for our buildings bridges dams and roads We walk on it drive on it and many of us live and work within its walls But very few of us know what it is We take for granted this ubiquitous substance which both literally and figuratively comprises much of modern civilization s constructed environment yet the story of its creation and development features a cast of fascinating characters and remarkable historical episodes Featuring a new epilogue on the Surfside condominium collapse and the current state of infrastructure in America this book delves into this history opening readers eyes at every turn In a lively narrative peppered with intriguing details author Robert Courland describes how some of the most famous personalities of history became involved in the development and use of concrete including King Herod the Great of Judea the Roman emperor Hadrian Thomas Edison who once owned the largest concrete cement plant in the world and architect Frank Lloyd Wright Courland points to recent archaeological evidence suggesting that the discovery of concrete directly led to the Neolithic Revolution and the rise of the earliest civilizations Much later the Romans reached extraordinarily high standards for concrete production showcasing their achievement in iconic buildings like the Coliseum and the Pantheon Amazingly with the fall of the Roman Empire the secrets of concrete manufacturing were lost for over a millennium The author explains that when concrete was rediscovered in the late eighteenth century it was initially viewed as an interesting novelty or at best a specialized building material suitable only for a narrow range of applications It was only toward the end of the nineteenth century that the use of concrete exploded During this rapid expansion industry lobbyists tried to disguise the fact that modern concrete had certain defects and critical shortcomings It is now recognized that modern concrete unlike its Roman predecessor gradually disintegrates with age Compounding this problem is another distressing fact the manufacture of concrete cement is a major contributor to global warming *Concrete Planet* is filled with incredible stories fascinating characters surprising facts and an array of intriguing insights into the building material that forms the basis of the infrastructure on which we depend **The National Union**

Barnhart, 2015-11-01 Writing the history of American archaeology especially concerning eighteenth and nineteenth century arguments is not always as straightforward as it might seem Archaeology s trajectory from an avocation to a semi profession to a specialized profession rather than being a linear progression was an untidy organic process that emerged from the intellectual tradition of antiquarianism It then closely allied itself with the natural sciences throughout the nineteenth century especially with geology and the debate about the origins and identity of the indigenous mound building cultures of the eastern United States In his reexamination of the eclectic interests and equally varied settings of nascent American archaeology Terry A Barnhart exposes several fundamental deeply embedded historiographical problems within the secondary literature relating to the nineteenth century debate about Mound Builders and American Indians Some issues are perceptual others contextual and still others are basic errors of fact Adding to the problem are semantic and contextual considerations arising from the problematic use of the term

race as a synonym for tribe nation and race proper a concept and construct that does not in all instances translate into current understanding and usage American Antiquities uses this early discourse on the mounds to reframe perennial anthropological problems relating to human origins and antiquity in North America **The Bulletin** ,1971 *Bulletin* American Anthropological Association,1958 *Catalogue: Authors* Peabody Museum of Archaeology and Ethnology.
