Instructor, 2001 **Principles of Mathematics in Operations Research** Levent Kandiller, 2006-12-18 Principles of Mathematics in Operations Research is a comprehensive survey of the mathematical concepts and principles of industrial mathematics. Its purpose is to provide students and professionals with an understanding of the fundamental mathematical principles used in Industrial Mathematics OR in modeling problems and application solutions. All the concepts presented in each chapter have undergone the learning scrutiny of the author and his students. The conceptual relationships within the chapter material have been developed in the classroom experience working with the students' level of understanding. The illustrative material throughout the book is worked out problems and examples of the mathematical principles, which were refined for student comprehension as the manuscript developed through its iterations and the chapter exercises are refined from the previous year's exercises. In sum, the author has carefully developed a pedagogically strong survey textbook of OR and Industrial Mathematics.

Web-Based Learning in K-12 Classrooms Jay Blanchard, James Marshall, 2013-10-23 Make sure your students get the most from their online learning experiences. Even though nearly every K-12 public school in the United States has broadband Internet access, the Web's vast potential as a teaching and learning tool has still not been realized. Web-based learning opportunities have been expensive, slow to develop, and time-consuming to implement, despite pressure on schools to adopt technology solutions that will cure their educational ills. *Web Based Learning in K-12 Classrooms: Opportunities and Challenges* chronicles the up and downs of online learning and offers unique insights into its future, providing a comprehensive curriculum-wide treatment of K-12 content areas: reading, science, mathematics, social studies, special education, counseling, virtual schools, exemplary schools, implementation issues, and educational Web sites. The Internet represents a powerful, complex set of technologies that offers your students access to unlimited knowledge, but that access doesn't replace the human interactions found in classrooms. Placing a student in front of a computer monitor is a supplement to classroom learning, not a substitute for it. Academics and education professionals address questions surrounding the key issues involved in successfully incorporating the wide range of Web-based learning opportunities: formal courses, demonstrations, simulations, collaborations, searches into the classroom, including technology content and implementation. *Web Based Learning in K-12 Classrooms* examines inquiry-based learning, online interaction, displaying student work online, Internet accessibility for students with disabilities, initiating school counselors into e-learning technologies, the role of government in virtual schools, Web-based schools in California, Virginia, Pennsylvania, Vermont, and Texas, a 13-category classification system for online educational resources, the ATLAS model for program implementation, evaluations of more than 1,000 pieces of online information, articles, research reports, news, and statistics, and 900 Web applications, tutorials, drills, games, and tests with evaluation criteria. *Web Based Learning in K-12 Classrooms* is a vital resource for educators interested in online learning applications across the K-12 curriculum. **ICEL2015-10th**
