

Given: $m = 350 \text{ g}$ or 0.350 kg ; $L = 2.3 \text{ m}$; $v = 50.0 \text{ m/s}$

Required: F_T

Analysis: First, calculate the linear density, μ . Second, rearrange the equation for the speed of a wave on a string to solve for the tension, F_T : $\mu = \frac{m}{L}$; $v = \sqrt{\frac{F_T}{\mu}}$

Solution:

$$\begin{aligned}\mu &= \frac{m}{L} \\ &= \frac{0.350 \text{ kg}}{2.3 \text{ m}}\end{aligned}$$

$$\mu = 0.152 \text{ kg/m} \text{ (one extra digit carried)}$$

$$v = \sqrt{\frac{F_T}{\mu}}$$

$$v^2 = \frac{F_T}{\mu}$$

$$\begin{aligned}F_T &= v^2 \mu \\ &= (50.0 \text{ m/s})^2 (0.152 \text{ kg/m}) \\ &= 380.4 \text{ N}\end{aligned}$$

$$F_T = 380 \text{ N}$$

Statement: The required tension of the string on the wave machine is 380 N.

Conte,N. Boccara,2012-12-06 In the many physical phenomena ruled by partial differential equations two extreme fields are currently overcrowded due to recent considerable developments 1 the field of completely integrable equations whose recent advances are the inverse spectral transform the recursion operator underlying Hamiltonian structures Lax pairs etc 2 the field of dynamical systems often built as models of observed physical phenomena turbulence intermittency Poincare sections transition to chaos etc In between there is a very large region where systems are neither integrable nor nonintegrable but partially integrable and people working in the latter domain often know methods from either 1 or 2 Due to the growing interest in partially integrable systems we decided to organize a meeting for physicists active or about to undertake research in this field and we thought that an appropriate form would be a school Indeed some of the above mentioned methods are often adaptable outside their original domain and therefore worth to be taught in an interdisciplinary school One of the main concerns was to keep a correct balance between physics and mathematics and this is reflected in the list of courses **Applied Mathematical Analysis and Computations I** Divine Wanduku,Shijun Zheng,Haomin Zhou,Zhan Chen,Andrew Sills,Ephraim Agyingi,2024-11-09 This volume convenes selected peer reviewed research and survey articles that address the modern state of the art in varied areas of applied mathematical analysis They primarily include presentations as well as invited contributions for the 1st Southern Georgia Mathematics Conference SGMC that was virtually held on April 2 3 2021 at the Georgia Southern University Statesboro USA Papers in this volume incorporate both advanced theory and methods from mathematical analysis and cover myriad topics like imaging and inverse problems evolutionary PDEs symbolic computation dynamics and data analysis data science computational mathematics and more This first volume focuses on mathematical analysis theory and applications These studies and findings contained herein will be of interest to researchers and graduate students working in the fields of mathematical analysis modeling data analysis and computation with applications in many interdisciplinary applied sciences as in statistics physics biology and medical imaging They are particularly relevant to those at the forefront of applied mathematical and statistical analysis as well as data science and other computational science disciplines In its first edition the Southern Georgia Mathematics Conference brought together 74 speakers from 70 different institutions from the USA Canada Austria and Botswana Attendees included faculty researchers experts graduate and undergraduate students from all over the world Engineering Physics - Part A
