Algebra and Trigonometry Richard S. Paul, Ernest F. Haeussler, 1978 **Intermediate Algebra** Elizabeth Difanis Phillips, Elizabeth D. Philips, Thomas Butts, Michael Shaughnessy, 1994 **Graduate Algebra** Louis Halle Rowen, 2008 This book is an expanded text for a graduate course in commutative algebra focusing on the algebraic underpinnings of algebraic geometry and of number theory Accordingly the theory of affine algebras is featured treated both directly and via the theory of Noetherian and Artinian modules and the theory of graded algebras is included to provide the foundation for projective varieties Book Jacket *Making Pre-Algebra Come Alive* Alfred S. Posamentier, 2000-07-21 Activities in Pre Algebra is a set of versatile enrichment exercises that covers a very broad range of mathematical topics and applications from the Moebius strip to the googol Several criteria have been used in developing the activities and in selecting the topics that are included All of them bear heavily and equally on our concerns for curriculum goals and classroom management Each activity is presented as a reproducible student investigation It is followed by guidelines and notes for the teacher Each activity is keyed to the National Council of Teachers of Mathematics NCTM Standards Revised This link to the NCTM standards allows teachers to facilitate linking classroom activities to specific state and school district content standards First and foremost the activities are meant to be motivational As much as possible we want this book to achieve the goal of being attractive to people who thought they didn't like mathematics To accomplish this it is necessary for the activities to be quite different from what students encounter in their basal texts different in both substance and form This seems especially critical no matter how excellent a basal text is being used nearly every class experiences the blahs Unfortunately this sort of boredom is often well entrenched long before the teacher and perhaps even the students are aware of it Presenting activities on a regular basis gives the variety and change of pace needed to sustain interest in any subject **Prentice Hall Algebra 1** Jan Fair, 1992 **Visual Group Theory** Nathan Carter, 2021-06-08 Recipient of the Mathematical Association of America's Beckenbach Book Prize in 2012 Group theory is the branch of mathematics that studies symmetry found in crystals art architecture music and many other contexts but its beauty is lost on students when it is taught in a technical style that is difficult to understand Visual Group Theory assumes only a high school mathematics background and covers a typical undergraduate course in group theory from a thoroughly visual perspective The more than 300 illustrations in Visual Group Theory bring groups subgroups homomorphisms products and quotients into clear view Every topic and theorem is accompanied with a visual demonstration of its meaning and import from the basics of groups and subgroups through advanced structural concepts such as semidirect products and Sylow theory [Planting the Seeds of Algebra, PreK-2](#) Monica Neagoy, 2012-04-20 The subject of algebra has always been important in American secondary mathematics education However algebra at the elementary level has been garnering increasing attention and importance over the past 15 years There is consequently a dire need for ideas suggestions and models for how best to achieve pre algebraic instruction in the

elementary grades Planting the Seeds of Algebra will empower teachers with theoretical and practical knowledge about both the content and pedagogy of such instruction and show them the different faces of algebra as it appears in the early grades The book will walk teachers of young children through many examples of K 6 math lessons and unpack step by step the hidden connections to higher algebra After reading this book teachers will be better equipped Report of the Proceedings of the ...
