Encyclopaedia of Occupational Health and Safety Jeanne Mager Stellman, 1998 [The Microbiological Safety of Low Water Activity Foods and Spices](#) Joshua B. Gurtler, Michael P. Doyle, Jeffrey L. Kornacki, 2014-12-08 Low water activity aw and dried foods such as dried dairy and meat products grain based and dried ready to eat cereal products powdered infant formula peanut and nut pastes as well as flours and meals have increasingly been associated with product recalls and foodborne outbreaks due to contamination by pathogens such as *Salmonella* spp and enterohemorrhagic *E. coli* In particular recent foodborne outbreaks and product recalls related to *Salmonella* contaminated spices have raised the level of public health concern for spices as agents of foodborne illnesses Presently most spices are grown outside the U S mainly in 8 countries India Indonesia China Brazil Peru Madagascar Mexico and Vietnam Many of these countries are under developed and spices are harvested and stored with little heed to sanitation The FDA has regulatory oversight of spices in the United States however the agency's control is largely limited to enforcing regulatory compliance through sampling and testing only after imported foodstuffs have crossed the U S border Unfortunately statistical sampling plans are inefficient tools for ensuring total food safety As a result the development and use of decontamination treatments is key This book provides an understanding of the microbial challenges to the safety of low aw foods and a historic backdrop to the paradigm shift now highlighting low aw foods as vehicles for foodborne pathogens Up to date facts and figures of foodborne illness outbreaks and product recalls are included Special attention is given to the uncanny ability of *Salmonella* to persist under dry conditions in food processing plants and foods A section is dedicated specifically to processing plant investigations providing practical approaches to determining sources of persistent bacterial strains in the industrial food processing environment

Readers are guided through dry cleaning wet cleaning and alternatives to processing plant hygiene and sanitation Separate chapters are devoted to low aw food commodities of interest including spices dried dairy based products low aw meat products dried ready to eat cereal products powdered infant formula nuts and nut pastes flours and meals chocolate and confectionary dried teas and herbs and pet foods The book provides regulatory testing guidelines and recommendations as well as guidance through methodological and sampling challenges to testing spices and low aw foods for the presence of foodborne pathogens Chapters also address decontamination processes for low aw foods including heat steam irradiation microwave and alternative energy based treatments
