of Plant Hormones T.C. Moore, 2012-12-06 Biochemistry and Physiology of Plant Hormones is intended primarily as a  
 textbook or major reference for a one term intermediate level or advanced course dealing with hormonal regulation of  
 growth and development of seed plants for students majoring in biology botany and applied botany fields such as agronomy  
 forestry and horticulture Additionally it should be useful to others who wish to become familiar with the topic in relation to  
 their principal student or professional interests in related fields It is assumed that readers will have a background in  
 fundamental biology plant physiology and biochemistry The dominant objective of Biochemistry and Physiology of Plant Hor  
 mones is to summarize in a reasonably balanced and comprehensive way the current state of our fundamental knowledge  
 regarding the major kinds of hormones and the phytochrome pigment system Written primarily for students rather than  
 researchers the book is purposely brief Biochemical aspects have been given priority intentionally somewhat at the expense  
 of physiological considerations There are extensive citations of the literature both old and recent but it is hoped not so much  
 documentation as to make the book difficult to read The specific choices of publications to cite and illustrations to present  
 were made for different reasons often to illustrate historical development sometimes to illustrate ideas that later proved  
 invalid occasionally to exemplify conflicting hypotheses and most often to illustrate the current state of our knowledge about  
 hormonal phenomena      10 in One Study Package for CBSE Science Class 10 with Objective Questions & 3 Sample Papers
