

GENERAL

Maximum tire mileage and good handling qualities are directly related to care given wheels and tires. Wheels and tires should be regularly inspected for wear. If handling problems occur, see [1.25 TROUBLESHOOTING](#) for possible causes.

Always keep tires inflated to the recommended pressure and balance the wheel whenever a tire or tube is replaced.

REMOVAL

1. Place the motorcycle on a hydraulic center stand with the front wheel raised off the ground.
2. Inspect wheel bearings. See [2.8 SEALED WHEEL BEARINGS](#).
3. If present, carefully cut two cable straps to release front wheel speed sensor cable and front fender tip lamp wires from brake hose to left brake caliper.
4. See [Figure 2-2](#). On ABS equipped motorcycles, release front wheel speed sensor cable from clip as follows:
 - a. Push on lip at rear of clip to disengage from bracket.
 - b. Rotate tab (stamped ABS) rearward until clip is perpendicular to bracket and remove cable.
5. Remove two brake caliper mounting screws (with cable clip/bracket if ABS equipped). Slide brake caliper straight down to remove from brake disc. Using thru hole, cable strap caliper to rail of engine guard, so that it is not suspended by brake hose.
6. Remove brake caliper on right side of wheel.

NOTE

Do not operate the front brake hand lever with the front wheel removed or the caliper pistons may be forced out. Re seating pistons requires disassembly of the brake caliper.

7. See [Figure 2-3](#). Insert screwdriver or steel rod through hole in axle on right side of motorcycle. While holding axle stationary, remove the axle nut and flat washer on the left side.
8. Loosen the two axle holder nuts at bottom of right side fork slider.

Figure 2-2. Front Wheel Speed Sensor Cable Clip (ABS Equipped)

9. Using a soft mallet, gently tap end of axle towards right side of motorcycle. Catching external spacer(s), pull axle free of fork sliders, front wheel speed sensor (if ABS equipped), and wheel hub.

NOTE

If ABS equipped, never pull wheel speed sensor cable taut or use to retain wheel, axle or other components. Always keep wheel speed sensor (and ABS encoder bearing) away from magnetic fields (such as magnetic parts trays, magnetic base dial indicators, alternator rotors, etc.) or damage will occur.

10. Move wheel to bench area.

NOTE

Do not operate the front brake lever with the front wheel removed or the caliper pistons may be forced out. Re seating pistons requires disassembly of the caliper.

11. If necessary, remove five screws to release brake discs from hub.
