Concurrent Reactive Plans Michael Beetz, 2003-06-29 In this book the author presents a new computational model of forestalling common flaws in autonomous robot behavior To this end robots are equipped with structured reactive plans SRPs which are concurrent control programs that can not only be interpreted but also be reasoned about and manipulated The author develops a representation for SRPs in which declarative statements for goals perceptions and beliefs make the structure and purpose of SRPs explicit and thereby simplify and speed up reasoning about SRPs and their projections furthermore a notation is introduced allowing for transforming and manipulating SRPs Using this notation a planning system can diagnose and forestall common flaws in robot plans that cannot be dealt with in other planning representations Finally the language for writing SRPs is extended into a high level language that can handle both planning and execution actions
