Air Refrigeration Cycles Objective Questions And Answers:

Refrigeration and Air Conditioning Problems & Objectives , General Questions of Heat Transfer, Refrigeration & Air Conditioning Shivendra Nandan,Prakash Sharma,Satyajeet Kant, Heating ventilation and air conditioning is the technology of indoor and vehicular environmental comfort Its goal is to provide thermal comfort and acceptable indoor air quality **A Textbook of Engineering Thermodynamics** Ghosh B.B./ Roy P.C./ Chakrabarti Satyajit & Ghosh Samir,2014 Thermodynamics being one of the basic subjects in all engineering disciplines there are umpteen books on it The main aim of this one is to make the subject effortless for the students and help them pass the examination with flying colours For this reason the text has been kept short and simple and the book provides a heavy dose of solved examples MCQs review questions and numerical problems to hone the problem solving skills It has been written in such a style that the students of all streams be it mechanical chemical electrical or civil will find it comprehensible The book covers the syllabuses of degree classes of most Indian universities It is designed to serve both levels the basic as well as applied thermodynamics to give a new dimension to the learning of thermodynamics Key Features More than 225 Solved Examples More than 240 MCQs More than 210 Review Questions More than 210 Numerical Problems **Thermodynamics and Thermal Engineering** J.Selwin Rajadurai,2003 Thermodynamics And Thermal Engineering A Core Text In SI Units Meets The Complete Requirements Of The Students Of Mechanical Engineering In All Universities Ultimately It Aims At Aiding The Students Genuinely Understand The Basic Principles Of Thermodynamics And Apply Those Concepts To Practical Problems Confidently It Provides A Clear And Detailed Exposition Of Basic Principles Of Thermodynamics Concepts Like Enthalpy Entropy Reversibility Availability Are Presented In Depth And In A Simple Manner Important Applications Of Thermodynamics Like Various Engineering Cycles And Processes Are Explained In Detail Introduction To Latest Topics Are Enclosed At The End Each Topic Is Further Supplemented With Solved Problems Including Problems From Gate Ies Exams Objective Questions Along With Answers Review Questions And Exercise Problems Alongwith Answers For An Indepth Understanding Of The Subject *Objective Type Questions in Mechanical Engineering* Singh V.P./ Pratap Raveesh & Akhai Shalom, Useful book for GATE IES UPSC PSUs and other competitive examinations Latest objective type questions with answers About 5000 objective type questions CUET-PG Architecture SCQP04 Question Bank Book 2000 MCQ With Solution Chapter Wise ,2024-06-24 CUET PG Architecture Planning SCQP04 Question Bank Book 2000 MCQ With Solution Chapter Wise As Per Updated Syllabus Highlights of CUET PG Architecture Planning Question Bank 2000 Questions Answer MCQ 285 MCQ of Each Chapter Unit wise As Per the Updated Syllabus Include Most Expected MCQ as per Paper Pattern Exam Pattern All Questions Design by Expert Faculties JRF Holder *Generation and Utilization of Electrical Energy* S. Sivanagaraju,2010 Generation and Utilization of Electrical Energy is a comprehensive text designed for undergraduate courses in electrical engineering The text introduces the reader to the generation of electrical energy and then goes on to

explain how this energy can be effectively utilized for various applications like welding electric traction illumination and electrolysis The detailed explanations of practical applications make this an ideal reference book both inside and outside the classroom , *Concepts of HVAC* Shivendra Nandan,Rishikesh Trivedi,Satyajeet Kant, Inside an air conditioning system is a chemical refrigerant which is a chemical compound that easily changes states from liquid to vapor and back again A common trade name for refrigerant which you may be familiar with is Freon In addition to refrigerant an air conditioning system requires a minimum of four components the compressor condenser metering device and evaporator 1 The CompressorThe compressor is the heart of the system Just like your heart pumps blood through your body at a specific flow rate and pressure the compressor pumps the refrigerant through the air conditioning system at a designed flow rate and pressure When the refrigerant enters the compressor it is in a vapor state It enters the compressor because it is literally being sucked into it That is why the side of the compressor where refrigerant enters is called the suction side or low pressure side As its name suggests the compressor compresses the vapor as it is being pumped through it When a vapor is compressed both the pressure and temperature of that vapor increases The vapor leaving the compressor is very hot You will get burnt if you were to touch the copper refrigerant lines coming off of the compressor In the above diagram the high pressure vapor refrigerant is represented by red dots 2 The CondenserThe high temperature refrigerant passes into a condenser coil As the vapor refrigerant travels through the coil air from a fan passes over the coil to cool the vapor refrigerant As the vapor cools it condenses and becomes a liquid this is referred to as a change of state This change of state from vapor to liquid is essential You may be somewhat familiar with a typical home system where the condensing unit sits outside When operating you can place your hand over this unit and feel the warm air being blown out Inside this condensing unit high temperature vapor refrigerant is entering into it as the heat energy in the vapor is removed by blowing air across the condenser coil the vapor changes to a liquid You will soon see that the heat being blown from the condensing unit is the heat that used to be in your home In the above diagram the liquid is represented by solid red 3 The Metering DeviceThe metering device controls the flow of the liquid refrigerant to the next component which is the evaporator This is a dividing point between the high pressure and low pressure sides of the system As this high pressure liquid is passing through the metering device and into the evaporator the pressure drops 4 The EvaporatorAfter leaving the metering device the refrigerant immediately enters a coil called the evaporator This coil or evaporator has a fan blowing across it As the refrigerant enters the coil at a lower pressure it begins to bubble and boil and change state back to a vapor During this process of changing state energy in the form of heat is being removed from the air passing over the coil and is being absorbed by the refrigerant The heat that was in the air is transferred into the refrigerant Since heat was removed from the air blowing over the evaporator coil the air leaving the evaporator coil is cold You see that an air conditioner makes cold air by having the heat that is in the air absorbed into the refrigerant Now that heat from your computer room office area etc is in the refrigerant what do we do with

it The heated refrigerant is sucked into the compressor and pumped back to the condenser coil Here in the condenser the heat that was earlier absorbed by the refrigerant in the evaporator section from the space we are cooling is released and removed The process of the refrigerant changing states from vapor to liquid releasing heat through the condenser and from vapor to liquid absorbing heat in the evaporator is how an air conditioner works *Gas Appliance Merchandising* ,1932
