Vogler,2016-03-10 Industrialized housing has been a common phenomenon in the building industry since the industrial revolution the casting of iron components enabled Victorian iron casters to prefabricate entire buildings and to export them to all British colonies It got a second boost from Modernist architects like Ludwig Mies van der Rohe Walter Gropius and Konrad Wachsmann and a third boost in the US when the soldiers came back from the Second World War in 1945 and wanted to buy a ready made house In the later decades of the 20th century composite prototypes were built Timber frame houses are extremely popular in low density areas worldwide For densely populated areas housing is now firmly attached to reinforced concrete The contracting industries have developed efficient building methods for the concrete structures on which separate systems of claddings are fixed to form a house However in the coming decades designers builders and scientists also have to keep the environment in mind working with a minimal amount of materials and for minimizing embodied energy and energy use In the coming age minimal embodied energy and low ecological footprints are renewed values that will be added to energy positive housing and that will have an influence on the building technology of the future This will lead to a reformation of the building vocabulary Other materials will have to be chosen and developed to function in building elements and components *Integrated Vehicle Health Management* Ian K Jennions,2014-11-10 Integrated Vehicle Health Management Implementation and Lessons Learned is the fourth title in the IVHM series published by SAE International This new book introduces a variety of case studies lessons learned and insights on what it really means to develop implement or manage an integrated system of systems Integrated Vehicle Health Management Implementation and Lessons Learned brings to the reader a wide set of hands on stories made possible by the contribution of twenty three authors who agreed to share their experience and wisdom on how new technologies are developed and put to work This effort was again coordinated by Dr Ian K Jennions Director of the IVHM Centre at Cranfield University UK and editor of the previous books in the series Integrated Vehicle Health Management Implementation and Lessons Learned with seventeen fully illustrated chapters covers diverse areas of expertise such as the impact of trust human factors and evidential integrity in system development They are complemented by valuable insights on implementing APU health management aircraft
