Training Design in Aviation

Norman MacLeod, 2017-03-02 Well structured training based on sound theoretical principles can transform the system in which high performance is essential and in turn the organisation Yet the strategic role of cost effective training provision is often less well understood than it might be in all branches of aviation whether civil or regional general business or military This book analyzes the cycle of training design from the identification of requirement through to measurement of effectiveness Key issues in training design and management are illustrated with examples and learning is consolidated through case studies The book provides advice tools procedures and examples of best practice both recent and well established to assist aviation training personnel who aim to guarantee cost effective training The approach is highly practical but does not avoid covering the theory when needed An informative guide to the process of training analysis and course design the book examines each stage of the training design cycle in some depth In addition it looks at the application of quality management and of project management to training design Each chapter contains advice and techniques as well as examples drawn from the author's wealth of experience of training in aviation

A Cascade Optimization Strategy for

Solution of Difficult Multidisciplinary Design Problems, 1996 A research project to comparatively evaluate 10 nonlinear optimization algorithms was recently completed A conclusion was that no single optimizer could successfully solve all 40 problems in the test bed even though most optimizers successfully solved at least one third of the problems We realized that improved search directions and step lengths available in the 10 optimizers compared were not likely to alleviate the convergence difficulties For the solution of those difficult problems we have devised an alternative approach called cascade optimization strategy The cascade strategy uses several optimizers one followed by another in a specified sequence to solve a problem A pseudorandom scheme perturbs design variables between the optimizers The cascade strategy has been tested successfully in the design of supersonic and subsonic aircraft configurations and air breathing engines for high speed civil transport applications These problems could not be successfully solved by an individual optimizer The cascade optimization strategy however generated feasible optimum solutions for both aircraft and engine problems This paper presents the cascade strategy and solutions to a number of these problems
