

Answer Key for Student Worksheet on Energy Resources

1a) What does it mean when an energy resource is said to be "renewable"?

Possible responses: Renewable resources regenerate or can be replaced in a relatively short time period (such as the length of a human life).

1b) What does it mean when an energy resource is said to be "non-renewable."

Non-renewable energy resources are in limited supply, in danger of depletion, and take a very long time to make. (No one knows exactly how long, but longer than any human life, and maybe even billions of years).

2a) Give three or more examples of renewable energy resources.

Responses may include any three of the following

solar energy

geothermal or natural steam energy

wind energy

hydro or water energy from rivers, tides, or ocean waves

biomass, including wood, plant fibers, dried animal dung (waste)

b) Give three or more examples of non-renewable energy resources.

Responses may include any three of the following:

Coal or peat

natural gas

petroleum or liquid gas

nuclear fission (uranium)

3) What are "fossil fuels"? Which non-renewable energy resources are "fossil fuels"?

Fossil fuels are nonrenewable energy resources; they include coal, natural gas, and petroleum. They are called fossil fuels because they were formed over millions and millions of years by the action of heat from the Earth's core and pressure from rock and soil on the remains (or "fossils") of dead plants and animals. All of the nonrenewable energy resources except nuclear fission use fossil fuels.
