of companies in the European aviation industry The focus is on the design production and maintenance of components
assemblies engines and the aircraft itself In contrast to other industries the technical aviation industry is subject to many

consultants with SHM design development and research experience from NASA industry and academia each heading up
sections in their own areas of expertise and co coordinating contributions from leading experts the book collates together in
one text the state of the art in SHM research technology and applications It has been written primarily as a reference text for
practitioners for those in related disciplines and for graduate students in aerospace or systems engineering There are many
technologies involved in SHM and no single person can be an expert in all aspects of the discipline System Health
Management with Aerospace Applications provides an introduction to the major technologies issues and references in these
disparate but related SHM areas Since SHM has evolved most rapidly in aerospace the various applications described in this
book are taken primarily from the aerospace industry However the theories techniques and technologies discussed are
applicable to many engineering disciplines and application areas Readers will find sections on the basic theories and
concepts of SHM how it is applied in the system life cycle architecture design verification and validation etc the most
important methods used reliability quality assurance diagnostics prognostics etc and how SHM is applied in operations
