The holy grail for prognostics and health management PHM professionals in the aviation sector is to have integrated vehicle health management IVHM systems incorporated into standard aircraft maintenance policies Such a change from current aerospace industry practices would lend credibility to this field by validating its claims of reducing repair and maintenance costs and hence the overall cost of ownership of the asset Ultimately more widespread use of advanced PHM techniques will have a positive impact on safety and for some cases might even allow aircraft designers to reduce the weight of components because the uncertainty associated with estimating their predicted useful life can be reduced We will discuss how standard maintenance procedures are developed who the various stakeholders are and based on this understanding outline how new PHM systems can gain the required approval to be included in these standard practices There have been a few limited successes in this field already and we will discuss the lessons learned in developing these systems Finally we will review the progress that the structural health management SHM community has made and continues to make to change the way the industry regards automated SHM systems NOTE SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues SAE EDGE Research Reports are not intended to resolve the issues they identify or close any topic to further scrutiny Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2020006>

Implementação da

Manutenção Proativa em Sistemas Hidráulicos de Aeronaves Jeferson Perossi do Valle, 2024-03-28 A descontaminação dos sistemas hidráulicos são fatores preponderantes no processo de prevenção de falhas prematuras e queda de desempenho dos equipamentos. O surgimento de uma nova geração de equipamentos em que os componentes internos têm folgas cada vez menores a fim de gerar pressões elevadas requer fluidos cada vez mais limpos em virtude de entrarmos num mundo microscópico com orifícios de até 5 µm para circulação do fluido hidráulico. Podem-se imaginar os danos produzidos por um simples fio de cabelo com diâmetro médio de 80 µm além de outros contaminantes como resíduos sólidos provenientes de desgaste e poeira. Combater um inimigo invisível requer um avanço significativo no conceito de manutenção. A implementação da manutenção proativa inicia-se por meio de uma análise criteriosa do fluido presente no sistema através de rigorosos procedimentos na coleta das amostras. A solicitação, correta e interpretação dos ensaios a separação do material particulado e suas análises microestruturais e composições químicas trazem informações que possibilitam às equipes de manutenção identificarem a origem das falhas ainda no início da cadeia destrutiva. **Journal of Guidance, Control, and Dynamics**, 2007 *Scientific and Technical Aerospace Reports*, 1986
