

Chapter 5 The Periodic Table

Section 5.1 Organizing the Elements

(pages 125–129)

This section explains how Mendeleev organized elements into a periodic table. It also discusses the predictions he made about undiscovered elements and later the discovery of those elements supported his version of the table of the table.

Reading Strategy (page 126)

Identifying Main Ideas As you read, complete the table by identifying the main idea for each topic. For more information on this reading strategy, see the **Reading and Study Skills** in the **Skills and Reference Handbook** at the end of your textbook.

Topic	Main Idea
Mendeleev's proposal	Mendeleev arranged the elements into rows in order of increasing mass so that elements with similar properties were in the same column.
Mendeleev's prediction	Mendeleev used the properties of existing elements to predict properties of undiscovered elements.
Evidence supporting Mendeleev's table	The close match between Mendeleev's predictions and the actual properties of new elements argued that Mendeleev's periodic table could be correct.
