R Bowker Publishing,1996-09 *Semiconductor Design and Implementation Issues in Integrated Vehicle Electronics* John

H. Hall,2005 This major research study provides a fresh critical look at the way automobile electronics are and should be

built Written by Silicon Valley pioneer John Hall this book is based on his nearly 40 years of experience in developing and

producing semiconductors for the automobile industry and other customers Highly readable and comprehensible for even

beginning students of electronics and semiconductor design this volume provides an in depth explanation of the factors to be

considered when building vehicle systems Starting with a concise history of vehicle electronics Hall walks the reader through

the environmental conditions faced by these systems and the variety of failure mechanisms that can occur Basic and

advanced semiconductor issues raised by vehicle implementation are then discussed in detail A wide range of issues

confronting designers from over marketing of risky features to time and cost constraints are explained Complex electronic

modules from many different manufacturers are examined and discussed as real world case studies of good and bad design

techniques Hall concludes by providing design recommendations that will allow vehicle electronics system developers to

build much tougher devices at little or no incremental production cost This book is the first major work to focus on key issues

emerging as major causes of safety and performance problems Vehicle makers increasingly seek market advantages by

providing ever more capable electronics in their products While these features add much value to vehicles they fail in ways

that are beyond the experience and comprehension of most technicians and accident investigators By combining decades of

design experience and innovation with extensive research Hall has produced unique insights and explanations so engineers
