Peasant festival imagery began in sixteenth century Nuremberg when the city played host to a series of religious and secular festivals The peasant festival images were first produced as woodcut prints in the decade between 1524 and 1535 by Sebald Beham These peasant festival prints show celebrating in a variety of ways including dancing eating and drinking and playing games In *Before Bruegel* Alison Stewart takes a fresh look at these images and explores them within their historical and cultural contexts including the introduction of the Lutheran Reformation into the town s institutions and the accompanying re evaluation of the town s popular festivals Stewart goes beyond the black and white approaches of previous interpretations to examine the festival prints in a more complex manner In the first publication of its kind Stewart makes the case for a range of meanings these works held for a sixteenth century audience and for Beham s pictorial inventiveness and his business savvy Beham is credited with inventing the subject of peasant festivals in Northern Renaissance art and for creating a market for the subject by the middle of the sixteenth century with his large scale woodcuts at Nuremberg and with tiny engravings at Frankfurt Stewart shows that the market Beham created for prints with the theme of peasant festivals paved the way for Pieter Bruegel s Netherlandish paintings of the same theme dating but a few years later

Transfer Cells David McCurdy,Gregorio Hueros,2015-05-18 Transfer cells are anatomically specialized cells optimized to support high levels of nutrient transport in plants These cells trans differentiate from existing cell types by developing extensive and localized wall ingrowth labyrinths to amplify plasma membrane surface area which in turn supports high densities of membrane transporters Unsurprisingly therefore transfer cells are found at key anatomical sites for nutrient acquisition distribution and exchange Transfer cells are involved in delivery of nutrients between generations and in the development of reproductive organs and also facilitate the exchange of nutrients that characterize symbiotic associations Transfer cells occur across all taxonomic groups in higher plants and also in algae and fungi Deposition of wall ingrowth like structures are also seen in syncytia and giant cells which function as feeding sites for cyst and root knot nematodes respectively following their infection of roots Consequently the formation of highly localized wall ingrowth structures in diverse cell types appears to be an ancient anatomical adaption to facilitate enhanced rates of apoplastic transport of nutrients in plants In some systems a role for transfer cells in the formation of an anti pathogen protective barrier at these symplastic discontinuities has been inferred Remarkably the extent of cell wall ingrowth development at a particular site can show high plasticity suggesting that transfer cell differentiation might be a dynamic process adapted to the transport requirements of each physiological condition Recent studies exploiting different experimental systems to investigate transfer

cell biology have identified signaling pathways inducing transfer cell development and genes gene networks that define transfer cell identity and or are involved in building the wall ingrowth labyrinths themselves Further studies have defined the structure and composition of wall ingrowths in different systems leading in many instances to the conclusion that this process may involve previously uncharacterized mechanisms for localized wall deposition in plants Since transfer cells play important roles in plant development and productivity the latter being relevant to crop yield especially so in major agricultural species such as wheat barley soybean and maize understanding the molecular and cellular events leading to wall ingrowth deposition holds exciting promise to develop new strategies to improve plant performance a key imperative in addressing global food security This Research Topic presents a timely and comprehensive treatise on transfer cell biology to help define critical questions for future research and thereby generating a deeper understanding of these fascinating and important cells in plant biology
