Amba Axi Reference Guide:

Data Engineering and Communication Technology K. Ashoka Reddy, B. Rama Devi, Bobby George, K. Srujan Raju, 2021-05-23 This book includes selected papers presented at the 4th International Conference on Data Engineering and Communication Technology ICDECT 2020 held at Kakatiya Institute of Technology Science Warangal India during 25-26 September 2020. It features advanced multidisciplinary research towards the design of smart computing information systems and electronic systems. It also focuses on various innovation paradigms in system knowledge intelligence and sustainability which can be applied to provide viable solutions to diverse problems related to society, the environment, and industry.

Applied Reconfigurable Computing Vanderlei Bonato, Christos Bouganis, Marek Gorgon, 2016-03-15 This book constitutes the refereed proceedings of the 12th International Symposium on Applied Reconfigurable Computing ARC 2016 held in Rio de Janeiro, Brazil, in March 2016. The 20 full papers presented in this volume were carefully reviewed and selected from 47 submissions. They are organized in topical headings: video and image processing, fault-tolerant systems, tools and architectures, signal processing, and multicore systems. In addition, the book contains 3 invited papers and 8 poster papers on funded R&D running and completed projects.

An Open-Source Research Platform for Heterogeneous Systems on Chip Andreas Dominic Kurth, 2022-10-05 Heterogeneous systems on chip (HeSoCs) combine general-purpose feature-rich multi-core host processors with domain-specific programmable many-core accelerators (PMCA) to unite versatility with energy efficiency and peak performance. By virtue of their heterogeneity, HeSoCs hold the promise of increasing performance and energy efficiency compared to homogeneous multiprocessors because applications can be executed on hardware that is designed for them. However, this heterogeneity also increases system complexity substantially. This thesis presents the first research platform for HeSoCs where all components from accelerator cores to application programming interface are available under permissive open-source licenses. We begin by identifying the hardware and software components that are required in HeSoCs and by designing a representative hardware and software architecture. We then design, implement, and evaluate four critical HeSoC components that have not been discussed in research at the level required for an open-source implementation. First, we present a modular topology-agnostic high-performance on-chip communication platform which adheres to a state-of-the-art industry standard protocol. We show that the platform can be used to build high-bandwidth e.g. 2.5 GHz and 1024-bit data width end-to-end communication fabrics with high degrees of concurrency e.g. up to 256 independent concurrent transactions. Second, we present a modular and efficient solution for implementing atomic memory operations in highly scalable many-core processors which demonstrates near-optimal linear throughput scaling for various synthetic and real-world workloads and requires only 0.5 kGE per core. Third, we present a hardware/software solution for shared virtual memory that avoids the majority of translation lookaside buffer misses with prefetching, supports parallel burst transfers without additional buffers, and can be scaled with the workload and number of parallel processors. Our work improves accelerator performance for

memory intensive kernels by up to 4 Fourth we present a software toolchain for mixed data model heterogeneous compilation and OpenMP offloading Our work enables transparent memory sharing between a 64 bit host processor and a 32 bit accelerator at overheads below 0.7 % compared to 32 bit only execution Finally we combine our contributions to a research platform for state of the art HeSoCs and demonstrate its performance and flexibility *FPGAs* Juan Jose Rodriguez Andina, Eduardo de la Torre Arnanz, Maria Dolores Valdes, 2017-07-28 Field Programmable Gate Arrays FPGAs are currently recognized as the most suitable platform for the implementation of complex digital systems targeting an increasing number of industrial electronics applications They cover a huge variety of application areas such as aerospace food industry art industrial automation automotive biomedicine process control military logistics power electronics chemistry sensor networks robotics ultrasound security and artificial vision This book first presents the basic architectures of the devices to familiarize the reader with the fundamentals of FPGAs before identifying and discussing new resources that extend the ability of the devices to solve problems in new application domains Design methodologies are discussed and application examples are included for some of these domains e.g. mechatronics robotics and power systems **Handbook of Computer Architecture** Anupam Chattopadhyay, 2024-12-20 This handbook presents the key topics in the area of computer architecture covering from the basic to the most advanced topics including software and hardware design methodologies It will provide readers with the most comprehensive updated reference information covering applications in single core processors multicore processors application specific processors reconfigurable architectures emerging computing architectures processor design and programming flows test and verification This information benefits the readers as a full and quick technical reference with a high level review of computer architecture technology detailed technical descriptions and the latest practical applications *On-Chip Communication Architectures* Sudeep Pasricha, Nikil Dutt, 2010-07-28 Over the past decade system on chip SoC designs have evolved to address the ever increasing complexity of applications fueled by the era of digital convergence Improvements in process technology have effectively shrunk board level components so they can be integrated on a single chip New on chip communication architectures have been designed to support all inter component communication in a SoC design These communication architecture fabrics have a critical impact on the power consumption performance cost and design cycle time of modern SoC designs As application complexity strains the communication backbone of SoC designs academic and industrial R D efforts and dollars are increasingly focused on communication architecture design On Chip Communication Architectures is a comprehensive reference on concepts research and trends in on chip communication architecture design It will provide readers with a comprehensive survey not available elsewhere of all current standards for on chip communication architectures A definitive guide to on chip communication architectures explaining key concepts surveying research efforts and predicting future trends Detailed analysis of all popular standards for on chip communication architectures Comprehensive survey of all research on communication architectures

covering a wide range of topics relevant to this area spanning the past several years and up to date with the most current research efforts Future trends that will have a significant impact on research and design of communication architectures over the next several years
