

Grading Multiple-Choice Questions Using the Right-Rule Method and Strategies

U.C. Student Learning Goals: 1. Final-Grade strategies

When a weighted average is applied to a set of numbers, more important (weight) is placed on some components of the set. One final average on this video is probably an example of a weighted average.

Consider two grading systems for determining your final class average. Each system is a weighted average of measures that include final grades, final exams grades, homeworks, and class participation.

Grading System I	Grading System II
Final average = 40%	Final average = 40%
Final exams grade = 20%	Final exams grade = 10%
Homeworks = 20%	Homeworks = 30%
Class participation = 20%	Class participation = 30%

1. If your values are the following, which grading system do you prefer? Justify!

- Final average = 88
- Final exams grade = 88
- Homeworks = 90
- Class participation = 90

2. If your score I dropped highest on the final exam, how does your final-grade average change under each system?
