Asymptotic Behavior and Stability Problems in Ordinary Differential Equations Lamberto Cesari, 2012-12-06 In the last few decades the theory of ordinary differential equations has grown rapidly under the action of forces which have been working both from within and without from within as a development and deepening of the concepts and of the topological and analytical methods brought about by LYAPUNOV POINCARÉ BENDIXSON and a few others at the turn of the century from without in the wake of the technological development particularly in communications servomechanisms automatic controls and electronics The early research of the authors just mentioned lay in challenging problems of astronomy but the line of thought thus produced found the most impressive applications in the new fields The body of research now accumulated is overwhelming and many books and reports have appeared on one or another of the multiple aspects of the new line of research which some authors call qualitative theory of differential equations The purpose of the present volume is to present many of the view points and questions in a readable short report for which completeness is not claimed The bibliographical notes in each section are intended to be a guide to more detailed expositions and to the original papers Some traditional topics such as the Sturm comparison theory have been omitted Also excluded were all those papers dealing with special differential equations motivated by and intended for the applications

Handbook of Exact Solutions to Mathematical Equations Andrei D. Polyanin, 2024-08-26 This reference book describes the exact solutions of the following types of mathematical equations Algebraic and Transcendental Equations Ordinary Differential Equations Systems of Ordinary Differential Equations First Order Partial Differential Equations Linear Equations and Problems of Mathematical Physics Nonlinear Equations of Mathematical Physics Systems of Partial Differential Equations Integral Equations Difference and Functional Equations Ordinary Functional Differential Equations Partial Functional Differential Equations The book delves into equations that find practical applications in a wide array of natural and engineering sciences including the theory

of heat and mass transfer wave theory hydrodynamics gas dynamics combustion theory elasticity theory general mechanics theoretical physics nonlinear optics biology chemical engineering sciences ecology and more Most of these equations are of a reasonably general form and dependent on free parameters or arbitrary functions The Handbook of Exact Solutions to Mathematical Equations generally has no analogs in world literature and contains a vast amount of new material The exact solutions given in the book being rigorous mathematical standards can be used as test problems to assess the accuracy and verify the adequacy of various numerical and approximate analytical methods for solving mathematical equations as well as to check and compare the effectiveness of exact analytical methods Mathematics of Complexity and Dynamical Systems

Robert A. Meyers, 2011-10-05 Mathematics of Complexity and Dynamical Systems is an authoritative reference to the basic tools and concepts of complexity systems theory and dynamical systems from the perspective of pure and applied mathematics Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self organization e g the spontaneous formation of temporal spatial or functional structures These systems are often characterized by extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic The more than 100 entries in this wide ranging single source work provide a comprehensive explication of the theory and applications of mathematical complexity covering ergodic theory fractals and multifractals dynamical systems perturbation theory solitons systems and control theory and related topics Mathematics of Complexity and Dynamical Systems is an essential reference for all those interested in mathematical complexity from undergraduate and graduate students up through professional researchers **Function Theoretic Solutions of Certain**

Boundary-value Problems V. P. Sreedharan, 1961 The domains of analyticity of solutions of the equation $\Delta u + k^2 u = 0$ in two independent variables are studied with a view to solving boundary value problems in the large The boundary value problems are transformed into function theoretic problems Specifically the Sommerfeld half plane problem for $\Delta u + K^2 u = 0$ is solved A related result on integral equations is obtained Green's functions for a wedge with various boundary conditions are constructed in the case of the equation $\Delta u + k^2 u = 0$ Author

Stability and Bifurcation Theory for Non-Autonomous Differential Equations Anna Capietto, Peter Kloeden, Jean Mawhin, Sylvia Novo, Miguel Ortega, 2012-12-14 This volume contains the notes from five lecture courses devoted to nonautonomous differential systems in which appropriate topological and dynamical techniques were described and applied to a variety of problems The courses took place during the C I M E Session Stability and Bifurcation Problems for Non Autonomous Differential Equations held in Cetraro Italy June 19-25 2011 Anna Capietto and Jean Mawhin lectured on nonlinear boundary value problems they applied the Maslov index and degree theoretic methods in this context Rafael Ortega discussed the theory of twist maps with nonperiodic phase and presented applications Peter Kloeden and Sylvia Novo showed how dynamical methods can be used to study the stability bifurcation properties of bounded solutions and of
