Many perhaps most textbooks of quantum mechanics present a Copenhagen single system angle fewer present the subject matter as an instrument for treating ensembles but the two methods have been silently coexisting since the mid Thirties This lingering dichotomy of purpose for a major physical discipline has much shrouded further insights into the foundations of quantum theory Quantum Reprogramming resolves this long standing dichotomy by examining the mutual relation between single systems and ensembles assigning each its own tools for treating the subject at hand i e Schr dinger Dirac methods for ensembles versus period integrals for single systems A unified treatment of integer and fractional quantum Hall effects and a finite description of the electron s anomalies are mentioned as measures of justification for the chosen procedure of resolving an old time dichotomy The methods of presentation are in part elementary with repetitive references needed to delineate differences with respect to standard methods The parts on period integrals are developed with a perspective on elementary methods in physics thus leading up to some standard results of de Rham theory and algebraic topology Audience Students of physics mathematics philosophers as well as outsiders with a general interest in the conceptual development of physics will find useful reading in these pages which will stimulate further inquiry and study Catalog of Copyright Entries.
