SY 2022-2023**

Instructions: Read each question carefully and shade the correct answer in the answer sheet provided to you. Do not write anything on this test questionnaire.

1. Which refers to the only planet in the solar system that gave rise to complex life?
A. Earth
B. Mars
C. Mercury
D. Venus

2. Major human activities cause great destructions on Earth's subsystems. Since energy and matter is cycled within the spheres and being part of the system, these harmful activities bring forth destruction to us in a boomerang effect. One example of this is the Global warming. As a student, what recommendation can you give to solve this problem?
A. Report the violators to the United Nations.
B. Just ignore and continue your daily routines.
C. Be active in advocating change by rallying outside government hall.
D. Start the change from yourself by not contributing pollution to the environment.

For items 3-4, refer to the chemical formula and property of the minerals presented in the table below.

Table 1. Chemical formula and property of the minerals

	Minerals	
	Olivine	Hematite
Chemical formula	(Mg,Fe) ₂ SiO ₄	Fe ₂ O ₃
Hardness (max)	7	6

3. Which of the following inference can be made about the two minerals?
A. Olivine can scratch hematite.
B. Hematite can scratch olivine.
C. The two minerals can scratch each other.
D. Neither of the two could scratch the other.

4. Which chemical groups do these two minerals belong?
A. Olivine = oxide; hematite = sulfate
B. Olivine = silicate; hematite = oxide
C. Olivine = sulfate; hematite = oxide
D. Olivine = oxide; hematite = silicate

Undergraduate Mathematics for the Life Sciences Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see Resources in Education, 2001-10

Attitudes towards English in Europe Andrew Linn,Neil Bermel,Gibson Ferguson,2015-07-24 The status of English in Europe is changing and this book offers a series of studies of attitudes to English today Until recently English was often seen as an opportunity for Europeans to take part in the global market but increasingly English is viewed as a threat to the national languages of Europe and the idea that Europeans are equally at home in English is being challenged This book will appeal to anyone interested in global English

Teaching with Technology, Volume 2 G. Christopher Clark,Sherry A. Clouser,2012

Active Learning in College Science Joel J. Mintzes,Emily M. Walter,2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman's 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of

exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book s final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of na ve notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for
