

The Stickleback Fish - A Story of Modern Evolution

Sticklebacks are a small fish commonly found in freshwater. To understand this species better, scientists compared them to related species and discovered the genetic that controlled the development of spines. This led to the discovery that spines are not just a defense, but also a signal.

Background

Go to: https://www.youtube.com/watch?v=...
and watch a short video about the Stickleback fish.

1. What are the main and unique findings? Researchers found that the Stickleback fish have a unique genetic code that controls the development of spines. This led to the discovery that spines are not just a defense, but also a signal.

2. Name 3 differences between the two species. 1. Stickleback fish have a unique genetic code that controls the development of spines. 2. Stickleback fish have a unique genetic code that controls the development of spines. 3. Stickleback fish have a unique genetic code that controls the development of spines.

3. How many total genetic differences were found? 1000 (out of 10,000 total differences) (out of 10,000 total differences)

4. How many genes in the fish genome? 1000 (out of 10,000 total genes) (out of 10,000 total genes)

Wild Immunology—The Answers Are Out There Gregory M. Woods, Andrew S. Flies, 2019-03-20 Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher Nature has undertaken an immense amount of work throughout evolution The evolutionary process has provided a power of information that can address key questions such as Which immune molecules and pathways are conserved across species Which molecules and pathways are exploited by pathogens to cause disease What methods can be broadly used or readily adapted for wild immunology How does co infection and exposure to a dynamic environment affect immunity Section 1 addresses these questions through an evolutionary approach Laboratory mice have been instrumental in dissecting the nuances of the immune system The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice A better understanding of wild immunology is required and sets the scene for the subsequent papers Although nature doesn't ask for a fee it is appropriate that nature is repaid in one form or another The translational theme of the second section incorporates papers that translate wild immunology back to nature But any non human non laboratory mouse research environment is hindered by a lack of research tools hence the underlying theme throughout the second section Physiological resource allocation is carefully balanced according to the most important needs of the body Tissue homeostasis can involve trade offs between energy requirements of the host and compensatory mechanisms to respond to infection The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations Technology has provided substantial advances in understanding the immune system at cellular and molecular levels The specificity of these tools e.g monoclonal antibodies often limits the study to a specific species or strain A consequence of similar genetic sequences or cross reactivity is that the technology can be adapted to wild species Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species

Improbable Destinies Jonathan Losos, 2017-08-08 A dazzling tour of evolution in action that sheds light on one of the greatest debates in science The natural world is full of fascinating instances of convergence phenomena like eyes and wings and tree climbing lizards that have evolved independently multiple times Convergence suggests that evolution is predictable and if we could replay the tape of life we would get the same outcome But there are also many examples of contingency cases where the tiniest change a random mutation or an ancient butterfly sneeze caused evolution to take a completely different course So are we humans and all the plants and animals in the world today inevitabilities or evolutionary freaks What role does chance play in evolution And what could it tell us about life on other planets In Improbable Destinies renowned researcher Jonathan Losos reveals what the latest breakthroughs in evolutionary biology tell us about one of the greatest ongoing debates in science Evolution can occur far more rapidly than Darwin expected which has opened the door to something that was previously thought impossible experimental studies of evolution in nature Drawing on his own work with anole lizards on the Caribbean islands as well as studies of guppies foxes field mice and others being conducted around the world Losos reveals just how rapid and predictable evolution can be By charting the discoveries of the scientists who are rewriting our understanding of evolutionary biology Improbable Destinies will change the way we think and talk about evolution
