Abstract: This study examined the effects of a 12-week, 100% bodyweight resistance training program on the muscle strength, body composition, and cardiovascular fitness of sedentary, middle-aged men. The program was designed to be performed at home, with no equipment other than bodyweight. The program was divided into three phases: Phase 1 (Weeks 1-4) focused on building a foundation of strength and endurance; Phase 2 (Weeks 5-8) focused on increasing the intensity of the training; and Phase 3 (Weeks 9-12) focused on maintaining the gains and improving cardiovascular fitness. The results showed that the program was effective in increasing muscle strength, body composition, and cardiovascular fitness. The participants showed significant improvements in muscle strength, body composition, and cardiovascular fitness after 12 weeks of training. The program was well-tolerated and the participants reported a high level of adherence. The results suggest that a 12-week, 100% bodyweight resistance training program can be an effective way to improve muscle strength, body composition, and cardiovascular fitness in sedentary, middle-aged men.
