PGD Air Command® Packaged Gas/Electric

The Amana® brand PGD Air Command® Packaged Gas/Electric unit offers outstanding year-round heating and cooling comfort. Featuring high-efficiency compressors, you will enjoy lower power bills throughout the life of the system. The PGD's compact design is ideal for ground-level or rooftop applications.

Stainless Steel Heat Exchanger. Based on the unique design of our furnaces, the corrosion-resistant heat exchanger, manufactured with durable stainless steel, provides extra-efficient gas heating for natural gas and allows easy conversion to propane gas. Its compact tubular configuration and "dual diameter" construction provides excellent heat transfer for optimum operating efficiency. It's located upstream from the evaporator coil to effectively reduce condensation forming in the heat exchanger during cooling operations.

Copeland® High-efficiency Scroll Compressors. Used on these models to achieve the higher than average cooling efficiency numbers of more than 13.0 SEER. The 28K3 compressor is the most efficient, most effective and most reliable scroll compressor design available today. And it's one of the quietest with operating sound levels lower than those of an ordinary compressor. A high-operating pressure relief and a motor overload cut-out are both standard.

Direct Spark Ignition System. The DSI system is comprised of 4 components, including the integrated, micro-processor-based, direct spark ignition control that controls the entire ignition sequence, all blower operation and monitors all safety circuits. It also has an on-board diagnostic LED that flashes a to indicate particular system faults. The gas valve is a redundant valve and the flame sensor is the same as used on our furnaces. The fourth component, the igniter, consists of an electrode, insulator and ground rod. It is much less fragile than hot surface igniters and works well at voltage extremes.

Quiet Operating Sound Levels. The compressor and condenser fan motor are mounted on vibration isolators. The top panel isolates motor sounds, since the condenser fan motor is not attached.

Durable Bond Coils. Large surface area provides effective heat transfer and high cooling efficiency. Aluminum fins are bonded to copper tubing. Evaporator and condenser coils have both an enhanced fin surface and grooved tubes that provide higher efficiencies from a smaller surface area than ordinary coils. The coils are leak tested 3 times to ensure all units will pass the rigid leak test standard of less than 0.1 ounce per year.

"Positive-flow" Condensate Drain Pan. Constructed of a non-corrosive, long-lasting BMC-type plastic, the pan has a formed, sloping trough under the coil to reduce the collection of condensate and enhance indoor air quality. The coil is positioned in the unit where a specially designed internal trap has been designed and built into the unit to provide "Positive-flow" drainage in conjunction with the contoured drain pan.

Blower Performance Flexibility. The blowers for the various sizes have been carefully selected, designed and tested to achieve a great balance between performance and efficiency. For cooling, the circulator blower delays 7 seconds coming on and 30 seconds delay off. For heating, the blower delays 30 seconds coming on and there is a choice of 90, 120 or 150 seconds delay off.

Compact Cabinet. Compact and easy to handle. The exterior case has painted sheet metal that offers a high UV-resistant finish and full-length base rails on 2 sides for easier handling. The condenser fan motor assembly is not attached to the top cover; plus, there are no screws attaching the top cover along the back of the unit. All exterior screws are Semra-Gard™ coated. When properly anchored, meets the 2001 Florida Building Code unit integrity requirements for hurricane-type winds.
