Assessment of the Scientific Information for the Radiation Exposure Screening and Education Program

National Research Council, Division on Earth and Life Studies, Board on Radiation Effects Research, Committee to Assess the Scientific Information for the Radiation Exposure Screening and Education Program, 2005-10-01 The Radiation Exposure Compensation Act RECA was set up by Congress in 1990 to compensate people who have been diagnosed with specified cancers and chronic diseases that could have resulted from exposure to nuclear weapons tests at various U S test sites Eligible claimants include civilian onsite participants downwinders who lived in areas currently designated by RECA and uranium workers and ore transporters who meet specified residence or exposure criteria The Health Resources and Services Administration HRSA which oversees the screening education and referral services program for RECA populations asked the National Academies to review its program and assess whether new scientific information could be used to improve its program and determine if additional populations or geographic areas should be covered under RECA The report recommends Congress should establish a new science based process using a method called probability of causation assigned share PC AS to determine eligibility for compensation Because fallout may have been higher for people outside RECA designated areas the new PC AS process should apply to all residents of the continental US Alaska Hawaii and overseas US territories who have been diagnosed with specific RECA compensable diseases and who may have been exposed even in utero to radiation from U S nuclear weapons testing fallout However because the risks of radiation induced disease are generally low at the exposure levels of concern in RECA populations in most cases it is unlikely that exposure to radioactive fallout was a substantial contributing cause of cancer
