

Grading Multiple-Choice Questions Using the Right-Rule Method and Strategies 1.1 Student Answering Question 1: Final-Grade strategies

When a weighted average is applied to a set of numbers, more important (weight) is placed on some components of the set. One final average on this video is probably an example of a weighted average.

Consider two grading systems for determining your final class average. Each system is a weighted average of measures that include final grades, final exams grades, homeworks, and class participation.

Grading System 1	Grading System 2
Final average = 40%	Final average = 40%
Final exams grade = 20%	Final exams grade = 10%
Homeworks = 30%	Homeworks = 30%
Class participation = 10%	Class participation = 20%

1. If your values are the following, which grading system do you prefer, and why?

- Final average = 88
- Final exams grade = 88
- Homeworks = 90
- Class participation = 90

2. If your answer 1 showed highest on the final grade, how does your final-grade average change under each system?
