Diccionario Ingles Técnico Aeronáutico Facundo Conforti, Augusto DeSantis, La industria aeroespacial es la segunda actividad mas s normada luego de las activi dades nucleares esta regida por infinidad de normas reglamentaciones directivas documentacio n especi fica y todo tipo de manuales de referencia obligatoria La gran mayori a llega a manos de usuarios operadores talleristas etc en idioma in gle s el idioma de uso aerona utico por naturaleza A ello se suma el hecho de que la industria aerona utica no esta aislada de las actividades humanas sino que inte ractu a se nutre y hace su aporte a

ellas creando la necesidad de un sólido vínculo interdisciplinario. Ahora bien, si bien conocemos la existencia de esta necesidad de creación de un fuerte vínculo interdisciplinario, también sabemos que en esta tarea nos encontramos con una gran barrera en el mismo: la comunicación. A partir de esto es posible considerar varios impedimentos en esa barrera. Uno de los más importantes es el idioma como factor concurrente: está el uso de regionalismos y como consecuencia de ellos la aplicación de jergas específicas. Desde los albores de la aviación hemos convivido con ese problema: sucede que al incrementarse día a día el número de operaciones, al crecer el parque aeronáutico y convertirse la aviación en una necesidad para el resto de las actividades humanas, las condiciones inseguras, los incidentes y los accidentes continuaron produciéndose quedando de manifiesto las fallencias de la industria en ese aspecto. ii Las nuevas tecnologías en materiales, los nuevos métodos de diseño y los planes de mantenimiento con técnicas de inspección no destructivas han reducido los riesgos latentes de fallas técnicas, pero no todos los aspectos relacionados con la vida humana pueden solucionarlos. La tecnología a pesar de que en paralelo con los desarrollos tecnológicos se han creado conceptos de gestión del factor humano que han contribuido en gran medida a la seguridad operacional y desde el año 1978 su estudio y prevención se ha expandido considerablemente por lo que en todos los programas de estudio y mejoramiento de la interacción antropológica CRM, MRM, LOFT, SHELL, etc. la comunicación es un vínculo importantísimo en la seguridad operacional. Si trasladamos lo expuesto a las tareas diarias, ya sea en la operación de una aeronave, en el mantenimiento de la misma, en el control del tránsito aéreo en la administración de las empresas operadoras o en cualquier otra actividad relacionada con la industria aeroespacial, se presentará el problema del uso del idioma: inglés, los regionalismos y las jergas específicas. Factores tendientes a desencadenar una sucesión de eventos inseguros que podrían desembocar en un incidente o en un accidente de consecuencias catastróficas. Cuando se analiza la comunicación oral y escrita es importante tener en cuenta que si bien manejamos un vocabulario técnico en común, es inevitable tanto en inglés como en español el uso de regionalismos y argot, jargon en inglés. Por ejemplo, un técnico ecuatoriano hablará de la bita cora de la aeronave mientras que uno argentino hablará de la libreta historial de la aeronave. Esta divergencia puede justificarse como un caso de regionalismos de países diferentes. Ahora bien, en el segundo ejemplo, el mismo técnico argentino en la provincia de Buenos Aires hablará de chavetas para frenar un bulón, mientras que otro técnico argentino en Córdoba hablará de cupillas para frenar un bulón. En paralelo se puede ver también que los diferentes fabricantes tienen lexicos específicos con respecto a sus productos: por ejemplo, uno de los más conocidos fabricantes británicos de motores posee un sistema propio de códigos de denominación y aplicación de Boletines de Servicio no mandatorios, muy distinto al que manejan sus competidores directos de Estados Unidos y Canadá. Por eso la intención de este manual iii es contemplar una cantidad importante de tales divergencias, presentándolas en cada asiento específico para que el uso del término y el concepto se apliquen con la mayor propiedad posible. La propuesta de este manual es constituirse en una obra de referencia pensada como apoyo idiomático para

interpretar y utilizar con mayor exactitud todos los niveles en que se presenta la terminología aeronáutica y contribuir a la aclaración de las dudas que continuamente se dan en la traducción de ambas lenguas en los diferentes campos de la aviación
