dimensional collisions between bodies with each agent solution being considered as an object or body with mass After a collision of two moving bodies with specified masses and velocities these bodies again separate with new velocities This collision causes the agents to move toward better positions in the search space The main algorithm CBO is internally parameter independent setting it apart from previously developed meta heuristics This algorithm is enhanced ECBO for more efficient applications in the optimal design of structures The algorithms are implemented in standard computer programming languages MATLAB and C and two main codes are provided for ease of use Structural Design James R.
