

Deer Ecology Analysis

In this activity, you will analyze data from the MSU Deer Lab.

The MSU Deer Lab was started in the 1970s by two biologists. It provides valuable data regarding deer population growth over several decades in the Mississippi region in correlation with changes in deer harvest (hunting) regulations.

Checkpoint 1: hunting is density-dependent or density-independent limiting factor? Explain your answer.

Ex 1a: Inquiry. Read the information provided and examine the images. Then answer the following questions.

1. Which 2 age classes of deer were most affected by habitat quality (hunting restrictions)?
2. [Click on the page entitled at Figure 27.](#) What happened to the yearling buck weight as deer harvest increased? Explain why this occurred.
3. Look at Figure 29 and read the related information. How did hunting affect the 2-year-old doe population?
4. What would have happened to the older doe population as a result of hunting? Why?
