The Cognitive Neurosciences, fifth edition Michael S. Gazzaniga,George R. Mangun,2014-10-24 The fifth edition of a work that defines the field of cognitive neuroscience with entirely new material that reflects recent advances in the field

Each edition of this classic reference has proved to be a benchmark in the developing field of cognitive neuroscience. The fifth edition of *The Cognitive Neurosciences* continues to chart new directions in the study of the biological underpinnings of complex cognition, the relationship between the structural and physiological mechanisms of the nervous system and the psychological reality of the mind. It offers entirely new material reflecting recent advances in the field. Many of the developments in cognitive neuroscience have been shaped by the introduction of novel tools and methodologies, and a new section is devoted to methods that promise to guide the field into the future, from sophisticated models of causality in brain function to the application of network theory to massive data sets. Another new section treats neuroscience and society, considering some of the moral and political quandaries posed by current neuroscientific methods. Other sections describe, among other things, new research that draws on developmental imaging to study the changing structure and function of the brain over the lifespan, progress in establishing increasingly precise models of memory, research that confirms the study of emotion and social cognition as a core area in cognitive neuroscience, and new findings that cast doubt on the so-called neural correlates of consciousness.

The chapters of this book offer both global and cross-country perspectives via case studies from India, Nepal, Ukraine, South Africa, and the USA, providing greater understanding, evidence, and strategies to achieve the resilience of vulnerable communities based on climate justice principles. It will be required reading for all scholars, students, and social work professionals, as well as those working in sustainability and community development.

Designing Mobility and Transport Services Mike Tovey, Andree Woodcock, Jane Osmond, 2016-11-10. European cities increasingly face problems caused by transport and traffic. For many people, transport provision is unsatisfactory, and current arrangements are leading to a deteriorating environment. A fundamental problem is that our currently fragmented approach makes it difficult to understand fully the circumstances and needs of transport users. In any overall approach, public transport is a crucial component. *Designing Mobility and Transport Services* shows how these issues can be addressed and resolved. The development of an inclusive, validated passenger experience measurement instrument is the first step in understanding the situation and thus tackling it. It is needed if we are to create high-quality, user-centred, integrated, accessible public transport services which are capable of attracting and retaining public transport users whilst meeting sustainability targets. The METPEX research project was devised to tackle these issues. Coordinated by Coventry University, the METPEX consortium brought together 16 European partners from 12 countries. The project's underlying rationale was the proposition that if transport operators and authorities were provided with a robust, reliable, and tailorable means of measuring the whole

multimodal passenger journey they could improve service provision The book describes how such an improvement can be achieved to attract travellers out of their private vehicles thereby reducing congestion and pollution and increasing health and well being It provides a template for a creative approach and a meta design narrative in designing for transport systems to enhance mobility choices by improving the door to door journey and thus underpin sustainable transport initiatives
