

Unit 3 Worksheet 3 – Quantitative Energy Problems

Energy constants (H₂O)

334 J/g	Heat of fusion (melting or freezing) H _f
2260 J/g	Heat of vaporization (evaporating or condensing) H _v
2.1 J/g°C	Heat capacity (c) of solid water
4.18 J/g°C	Heat capacity (c) of liquid water

$$Q = m \cdot c \cdot \Delta T$$

$$Q = m \cdot H_v \text{ or } m \cdot H_f$$

For each of the problems sketch a warming or cooling curve to help you decide which equation(s) to use to solve the problem. Keep a reasonable number of sig figs in your answers.

1. A cup of coffee (140 g) cools from 75°C down to comfortable room temperature 20.°C. How much energy does it release to the surroundings?

$$Q = 140g \cdot 4.18 \frac{J}{g^{\circ}C} \cdot 55^{\circ}C = 32,000 J \text{ or } 32 kJ$$

2. Suppose during volleyball practice, you lost 2.0 lbs of water due to sweating. If all of this water evaporated, how much energy did the water absorb from your body? Express your answer in kJ. 2.2 lbs = 1.0 kg

$$2.0 lbs \cdot \frac{1kg}{2.2 lbs} \cdot \frac{1000g}{1kg} = 910g$$

$$Q = 910g \cdot 2260 \frac{J}{g} = 2,100,000 J \text{ or } 2100 kJ$$

3. Suppose that during the Icy Hot lab that 65 kJ of energy were transferred to 450 g of water at 20°C. What would have been the final temperature of the water?

$$Q = m \cdot c \cdot \Delta T(^{\circ}C)$$

$$\Delta T = \frac{Q}{m \cdot c} = \frac{65,000 J}{450g \cdot 4.18 \frac{J}{g^{\circ}C}} = 34.6^{\circ}C = 35^{\circ}C$$

Answer For Quantitative Energy Problems:

Quantitative Energy Finance Fred Espen Benth, Valery A. Kholodnyi, Peter Laurence, 2013-08-28 Finance and energy markets have been an active scientific field for some time even though the development and applications of sophisticated quantitative methods in these areas are relatively new and referred to in a broader context as energy finance. Energy finance is often viewed as a branch of mathematical finance yet this area continues to provide a rich source of issues that are fuelling new and exciting research developments. Based on a special thematic year at the Wolfgang Pauli Institute WPI in Vienna, Austria, this edited collection features cutting edge research from leading scientists in the fields of energy and commodity finance. Topics discussed include modeling and analysis of energy and commodity markets, derivatives hedging and pricing, and optimal investment strategies, and modeling of emerging markets such as power and emissions. The book also confronts the challenges one faces in energy markets from a quantitative point of view as well as the recent advances in solving these problems using advanced mathematical, statistical, and numerical methods. By addressing the emerging area of quantitative energy finance, this volume will serve as a valuable resource for graduate level students and researchers studying financial mathematics, risk management, or energy finance. Problems--1968 Through 1970 United States. Congress. Joint Committee on Atomic Energy, 1971 *Engineering Thermodynamics and 21st Century Energy Problems* Donna Riley, 2022-05-31 Energy is a basic human need; technologies for energy conversion and use are fundamental to human survival. As energy technology evolves to meet demands for development and ecological sustainability in the 21st century, engineers need to have up-to-date skills and knowledge to meet the creative challenges posed by current and future energy problems. Further, engineers need to cultivate a commitment to and passion for lifelong learning which will enable us to actively engage new developments in the field. This undergraduate textbook companion seeks to develop these capacities in tomorrow's engineers in order to provide for future energy needs around the world. This book is designed to complement traditional texts in engineering thermodynamics and thus is organized to accompany explorations of the First and Second Laws, fundamental property relations, and various applications across

engineering disciplines It contains twenty modules targeted toward meeting five often neglected ABET outcomes ethics communication lifelong learning social context and contemporary issues The modules are based on pedagogies of liberation used for decades in the humanities and social sciences for instilling critical thinking and reflective action in students by bringing attention to power relations in the classroom and in the world This book is intended to produce a conversation and creative exploration around how to teach and learn thermodynamics differently Because liberative pedagogies are at their heart relational it is important to maintain spaces for discussing classroom practices with these modules and for sharing ideas for implementing critical pedagogies in engineering contexts The reader is therefore encouraged to visit the book s blog Table of Contents What and Why The First Law Making Theory Relevant The Second Law and Property Relations Thinking Big Picture about Energy and Sustainability **Energy Research and Development Policy Act** United States.
