Interpretation of Cardiac Arrhythmias Zainul Abedin, Robert Conner, 2012-12-06
Accurate diagnosis of arrhythmias is the goal of this volume
Before the clinician can accurately classify the multiple permutations of cardiac rhythm encountered in daily practice several essential preconditions must be met
At the most basic level the clinician must know the diagnostic criteria for each rhythm
Without a clear understanding of these criteria an accurate differential diagnosis is impossible and without accurate diagnosis correct intervention is a mere matter of chance
A second precondition of accurate rhythm diagnosis is an understanding of the mechanism of arrhythmias
Not uncommonly two or more arrhythmic mechanisms coexist confronting the clinician with a baffling mixture of apparently unrelated complexes and intervals
Without an understanding of the various arrhythmic mechanisms simple and complex the tangled skein of data can never be unraveled
Finally accurate arrhythmia diagnosis depends on skill attained through practice
The competent electrocardiographer combines the skills of precise measurement and rational application of logic with broad theoretical knowledge
The pleasure of electrocardiography is seeing through the surface appearance to the inner workings
Interpretation of Cardiac Arrhythmias presupposes no prior knowledge of arrhythmias and progresses from basic to the complex
The didactic sections focus extensively on the mechanism of arrhythmia using laddergrams and other diagrammatic devices to help the student visualize what is happening with the cardiac conduction system
Extensive self assessment sections enable students to apply critical skills and test their grasp of the diagnostic criteria

Nature-based solutions in agriculture: The case and pathway for adoption Iseman, T., Miralles-Wilhelm, F., 2021-02-03 Food system demands have increased exponentially in recent decades and are estimated to continue growing as global populations increase and economic affluence expands However the very foundation of a productive system healthy lands and soils and clean water supply is already under immense pressure In fact by the most credible estimates up to 52% of global agricultural lands are now moderately to severely degraded with millions of hectares

per year degrading to the point they are abandoned by the land manager The loss of productive land coupled with increased food demand pushes agriculture to be the primary driver in 80% of native habitat loss Agricultural irrigation is driving the majority of water scarcity issues in high risk basins threatening food systems community water supplies and ecosystem health These pressures have resulted in the global agriculture sector driving more biodiversity loss destruction of natural habitat soil degradation and depletion of natural resources around the world than any other industry
