The goal of this assignment is to use the distance and slope formulas to prove statements about geometric figures on the coordinate plane. Since the purpose is to prove a statement, you must show work.

1. Quadrilateral 1: Plot and label each point. A(-1, 3), B(3, 1), C(1, -2), and D(-3, 0).

2. Definition: A parallelogram is a quadrilateral with two pair of opposite sides that are parallel. Using the definition of a parallelogram, prove that Quadrilateral 1 is a parallelogram. (Hint: Find the slopes of all the sides)

AB: $\frac{-2-3}{3-(-1)} = -\frac{5}{4}$
 BC: $\frac{1-(-2)}{3-1} = \frac{3}{2}$
 CD: $\frac{0-(-2)}{-3-1} = -\frac{1}{2}$
 AD: $\frac{3-0}{-1-(-3)} = \frac{3}{2}$

opposite sides $\parallel$

3. Definition: A rectangle is a parallelogram with four right angles. Using the definition of a rectangle, prove that Quadrilateral 1 is NOT a rectangle. (Hint: What do you notice about the slopes of adjacent sides)

consecutive/adjacent sides are NOT opposite reciprocals

4. Definition: A rectangle is a parallelogram with congruent diagonals. Using the definition of a rectangle, prove that Quadrilateral 1 is NOT a rectangle. (Hint: Find the lengths of the diagonals, what do you notice?)

AC: $\sqrt{5^2 + 4^2} = \sqrt{41}$
 BD: $\sqrt{6^2 + 1^2} = \sqrt{37}$

5. Quadrilateral 2: Plot and label each point. A(-3, -3), B(1, 1), C(5, -3), and D(1, -7).

6. Definition: A parallelogram is a quadrilateral with two pairs of opposite sides that are parallel. Using the definition of a parallelogram, prove that Quadrilateral 2 is a parallelogram. (Hint: Find the slopes of all the sides)

AB: $\frac{1-(-3)}{1-(-3)} = 1$
 BC: $\frac{-3-1}{5-1} = -1$
 CD: $\frac{-7-(-3)}{1-5} = 1$
 AD: $\frac{-7-(-3)}{1-(-3)} = -1$

7. Definition: A rectangle is a parallelogram with 4 right angles. Using the definition, prove that Quadrilateral 2 is a rectangle. (Hint: What do you notice about the slopes of adjacent sides?)

opposite reciprocal slopes = $\perp$ = right angles

8. Definition: A rhombus is a parallelogram with all sides congruent. Using the definition, prove that Quadrilateral 2 is a rhombus. (Hint: Find the length or distance of each side.)

AB: $\sqrt{4^2 + 4^2} = \sqrt{32}$
 BC: $\sqrt{4^2 + 4^2} = \sqrt{32}$
 CD: $\sqrt{4^2 + 4^2} = \sqrt{32}$
 AD: $\sqrt{4^2 + 4^2} = \sqrt{32}$

Answer Key Punchline Number Theory:

Abstract Algebra Ronald Solomon, 2009 This undergraduate text takes a novel approach to the standard introductory material on groups rings and fields At the heart of the text is a semi historical journey through the early decades of the subject as it emerged in the revolutionary work of Euler Lagrange Gauss and Galois Avoiding excessive abstraction whenever possible the text focuses on the central problem of studying the solutions of polynomial equations Highlights include a proof of the Fundamental Theorem of Algebra essentially due to Euler and a proof of the constructability of the regular 17 gon in the manner of Gauss Another novel feature is the introduction of groups through a meditation on the meaning of congruence in the work of Euclid Everywhere in the text the goal is to make clear the links connecting abstract algebra to Euclidean geometry high school algebra and trigonometry in the hope that students pursuing a career as secondary mathematics educators will carry away a deeper and richer understanding of the high school mathematics curriculum Another goal is to encourage students insofar as possible in a textbook format to build the course for themselves with exercises integrally embedded in the text of each chapter

The Craft of System Security Sean Smith, John Marchesini, 2007-11-21 I believe The Craft of System Security is one of the best software security books on the market today It has not only breadth but depth covering topics ranging from cryptography networking and operating systems to the Web computer human interaction and how to improve the security of software systems by improving hardware Bottom line this book should be required reading for all who plan to call themselves security practitioners and an invaluable part of every university's computer science curriculum Edward Bonver CISSP Senior Software QA Engineer Product Security Symantec Corporation Here's to a fun exciting read a unique book chock full of practical examples of the uses and the misuses of computer security I expect that it will motivate a good number of college students to want to learn more about the field at the same time that it will satisfy the more experienced professional L Felipe Perrone Department of Computer Science Bucknell University Whether you're a security practitioner developer manager or administrator this book will give you the deep understanding necessary to meet today's security challenges and anticipate tomorrow's Unlike most books The Craft of System Security doesn't just review the modern security practitioner's toolkit It explains why each tool exists and discusses how to use it to solve real problems After quickly reviewing the history of computer security the authors move on to discuss the modern landscape showing how security challenges and responses have evolved and offering a coherent framework for understanding today's systems and vulnerabilities Next they systematically introduce the basic building blocks for securing contemporary systems apply those building blocks to today's applications and consider important emerging trends such as hardware based security After reading this book you will be able to Understand the classic Orange Book approach to security and its limitations Use operating system security tools and structures with examples from Windows Linux BSD and Solaris Learn how networking the Web and wireless technologies affect security Identify software security defects from buffer overflows to development

process flaws Understand cryptographic primitives and their use in secure systems Use best practice techniques for authenticating people and computer systems in diverse settings Use validation standards and testing to enhance confidence in a system's security Discover the security privacy and trust issues arising from desktop productivity tools Understand digital rights management watermarking information hiding and policy expression Learn principles of human computer interaction HCI design for improved security Understand the potential of emerging work in hardware based security and trusted computing

Developments in Linguistic Humour Theory Marta Dynel, 2013-10-15 This volume presents recent developments in the linguistics of humour It depicts new theoretical proposals for capturing different humorous forms and phenomena central to humour research thereby extending its scope The 15 contributions critically survey and develop the existing interpretative models or they postulate novel theoretical approaches to humour in order to better elucidate its workings The collection of articles offers cutting edge interdisciplinary explorations encompassing various realms of linguistics semantics pragmatics stylistics cognitive linguistics and language philosophy as well as drawing on findings from other fields primarily sociology psychology and anthropology Thanks to careful overviews of the relevant background literature the papers will be of use to not only researchers and academics but also students Albeit focused on theoretical developments rather than case studies the volume is illustrated with interesting research data such as the discourse of television programmes and series films and stand up comedy as well as jokes

Bit-string Physics: A Finite & Discrete Approach To Natural Philosophy Henry Pierre Noyes, J C Van Den Berg, 2001-09-06 We could be on the threshold of a scientific revolution Quantum mechanics is based on unique finite and discrete events General relativity assumes a continuous curved space time Reconciling the two remains the most fundamental unsolved scientific problem left over from the last century The papers of H Pierre Noyes collected in this volume reflect one attempt to achieve that unification by replacing the continuum with the bit string events of computer science Three principles are used physics can determine whether two quantities are the same or different measurement can tell something from nothing this structure modeled by binary addition and multiplication can leave a historical record consisting of a growing universe of bit strings This book is specifically addressed to those interested in the foundations of particle physics relativity quantum mechanics physical cosmology and the philosophy of science

An Anthropology of Puzzles Marcel Danesi, 2018-12-13 *An Anthropology of Puzzles* argues that the human brain is a puzzling organ which allows humans to literally solve their own problems of existence through puzzle format Noting the presence of puzzles everywhere in everyday life Marcel Danesi looks at puzzles in society since the dawn of history showing how their presence has guided large sections of human history from discoveries in mathematics to disquisitions in philosophy Danesi examines the cognitive processes that are involved in puzzle making and solving and connects them to the actual physical manifestations of classic puzzles Building on a concept of puzzles as based on Jungian archetypes such as the river crossing image the path metaphor and the journey Danesi suggests this could be one

way to understand the public fascination with puzzles As well as drawing on underlying mental archetypes the act of solving puzzles also provides an outlet to move beyond biological evolution and Danesi shows that puzzles could be the product of the same basic neural mechanism that produces language and culture Finally Danesi explores how understanding puzzles can be a new way of understanding our human culture

Why a new approach is needed in the quest for general artificial intelligence Since the inception of artificial intelligence we have been warned about the imminent arrival of computational systems that can replicate human thought processes Before we know it computers will become so intelligent that humans will be lucky to kept as pets And yet although artificial intelligence has become increasingly sophisticated with such achievements as driverless cars and humanless chess playing computer science has not yet created general artificial intelligence In Algorithms Are Not Enough Herbert Roitblat explains how artificial general intelligence may be possible and why a robocalypse is neither imminent nor likely Existing artificial intelligence Roitblat shows has been limited to solving path problems in which the entire problem consists of navigating a path of choices finding specific solutions to well structured problems Human problem solving on the other hand includes problems that consist of ill structured situations including the design of problem solving paths themselves These are insight problems and insight is an essential part of intelligence that has not been addressed by computer science Roitblat draws on cognitive science including psychology philosophy and history to identify the essential features of intelligence needed to achieve general artificial intelligence Roitblat describes current computational approaches to intelligence including the Turing Test machine learning and neural networks He identifies building blocks of natural intelligence including perception analogy ambiguity common sense and creativity General intelligence can create new representations to solve new problems but current computational intelligence cannot The human brain like the computer uses algorithms but general intelligence he argues is more than algorithmic processes **Xivth International Congress On Mathematical Physics** Jean-claude Zambrini, 2006-03-07 In 2003 the XIV International Congress on Mathematical Physics ICMP was held in Lisbon with more than 500 participants Twelve plenary talks were given in various fields of Mathematical Physics E Carlen On the relation between the Master equation and the Boltzmann Equation in Kinetic Theory A Chenciner Symmetries and simple solutions of

Well-Being Daniel Kahneman,Edward Diener,Norbert Schwarz,1999-07-08 The nature of well being is one of the most enduring and elusive subjects of human inquiry Well Being draws upon the latest scientific research to transform our understanding of this ancient question With contributions from leading authorities in psychology social psychology and neuroscience this volume presents the definitive account of current scientific efforts to understand human pleasure and pain contentment and despair The distinguished contributors to this volume combine a rigorous analysis of human sensations emotions and moods with a broad assessment of the many factors from heredity to nationality that bear on our well being Using the tools of experimental science the contributors confront the puzzles of human likes and dislikes Why do we grow accustomed and desensitized to changes in our lives both good and bad Does our happiness reflect the circumstances of our lives or is it determined by our temperament and personality Why do humans acquire tastes for sensations that are initially painful or unpleasant By examining the roots of our everyday likes and dislikes the book also sheds light on some of the more extreme examples of attraction and aversion such as addiction and depression Among its wide ranging inquiries Well Being examines systematic differences in moods and behaviors between genders explaining why women suffer higher rates of

depression and anxiety than men but are also more inclined to express positive emotions The book also makes international comparisons finding that some countries populations report higher levels of happiness than others The contributors deploy an array of methods from the surveys and questionnaires of social science to psychological and physiological experiments to develop a comprehensive new approach to the study of well being They show how the sensory pleasures of the body can tell us something about the higher pleasures of the mind and even how the effectiveness of our immune system can depend upon the health of our social relationships
