Thermal Oxidation of Polymer Blends Lyudmila Shibryaeva, Anatoly Popov, Gennady Zaikov, 2006-06-08 To identify the specific features of the kinetics of oxidation of polymer mixtures determine the key structural elements and create a model that can describe the mechanism of thermal oxidation of polymer mixtures it is necessary to determine the relation between the initial structure of a polymer mixture structural rearrangements associated with oxidation and the kinetics of the process The aim of this book is to elucidate the complicated problem concerning the connection between the structure and mechanism of oxidation of heterogeneous and heterophase polymer systems The material presented in this book concerns the specific features of the kinetics of oxidation and those of the structure of

polymer systems The book deals with an analysis of the key factors that can affect principally the mechanism of thermal oxidation of polymer mixtures determines the role of the phase morphology structure of components and the interface layer or boundary in the kinetics of oxidation of heterophase system by an example of mixtures of polyolefines Along with the kinetics of oxidation of heterophase systems problems of investigation of their structural parameters in the oxidized state are considered With this aim the material presented in the book concerns not only the mechanism of oxidation of polymer mixtures but also homopolymers of diverse morphology and model systems *Molecular Design of Tautomeric Compounds* V.I. The Black Box of Biology Michel Morange, 2020-06-09 In this masterful account a historian of science surveys the molecular biology revolution its origin and continuing impact Since the 1930s a molecular vision has been transforming biology Michel Morange provides an incisive and overarching history of this transformation from the early attempts to explain organisms by the structure of their chemical components to the birth and consolidation of genetics to the latest technologies and discoveries enabled by the new science of life Morange revisits *A History of Molecular Biology* and offers new insights from the past twenty years into his analysis *The Black Box of Biology* shows that what led to the incredible transformation of biology was not a simple accumulation of new results but the molecularization of a large part of biology In fact Morange argues the greatest biological achievements of the past few decades should still be understood within the molecular paradigm What has happened is not the displacement of molecular biology by other techniques and avenues of research but rather the fusion of molecular principles and concepts with those of other disciplines including genetics physics structural chemistry and computational biology This has produced decisive changes including the discoveries of regulatory RNAs the development of massive scientific programs such as human genome sequencing and the emergence of synthetic biology systems biology and epigenetics Original persuasive and breathtaking in its scope *The Black Box of Biology* sets a new standard for the history of the ongoing molecular revolution
