Information Ergonomics Michael Stein, Peter Sandl, 2012-03-30 The variety and increasing availability of hypermedia information systems which are used in stationary applications like operators consoles as well as mobile systems e.g. driver information and navigation systems in automobiles form a foundation for the mediatization of the society From the human engineering point of view this development and the ensuing increased importance of information systems for economic and private needs require careful deliberation of the derivation and application of ergonomics methods particularly in the field of information systems This book consists of two closely intertwined parts The first theoretical part defines the concept of an information system followed by an explanation of action regulation as well as cognitive theories to describe man information system interaction A comprehensive description of information ergonomics concludes the theoretical approach In the second practically oriented part of this book authors from industry as well as from academic institutes illustrate the variety of current information systems taken from different fields of transportation i.e. aviation automotive and railroad The reader thus gains an overview of various applications and their context of use as well as similarities and differences in design This does not only include a description of the different information systems but also places them in the context of the theories and models which were presented in the first part of this book

Automation and Human Performance Raja Parasuraman, Mustapha Mouloua, 2018-01-29 There is perhaps no facet of modern society where the influence of computer automation has not been felt Flight management systems for pilots diagnostic and surgical aids for physicians navigational displays for drivers and decision aiding systems for air traffic controllers represent only a few of the numerous domains in which powerful new automation technologies have been introduced The benefits that have been reaped from this technological revolution have been many At the same time automation has not always worked as planned by designers and many problems have arisen from minor inefficiencies of operation to large scale catastrophic accidents Understanding how humans interact with automation is vital for the successful design of new automated systems that are both safe and efficient The influence of automation technology on human performance has often been investigated in a fragmentary isolated manner with investigators conducting disconnected studies in different domains There has been little contact between these endeavors although principles gleaned from one domain may have implications for another Also with a few exceptions the research has tended to be empirical and only theory driven In recent years however various groups of

investigators have begun to examine human performance in automated systems in general and to develop theories of human interaction with automation technology This book presents the current theories and assesses the impact of automation on different aspects of human performance Both basic and applied research is presented to highlight the general principles of human computer interaction in several domains where automation technologies are widely implemented The major premise is that a broad based theory driven approach will have significant implications for the effective design of both current and future automation technologies This volume will be of considerable value to researchers in human
