This book encapsulates in detail the principles pertaining to legal and regulatory aspects of aerodromes. As the title denotes it discusses the various aspects of the structure and functioning of an aerodrome and the complexities involved. It focuses on the law and regulation of aerodrome certification and planning, aerodrome services, financial and economic planning, security management and governance. The airport industry is one of the fastest growing within the aviation industry, requiring innovation and creativity in management. This in turn has called for an increased focus on advanced management programmes for airport managers and lawyers. The Airport Management Professional Accreditation Programme (AMPAP) offered worldwide by the International Civil Aviation Organization and Airports Council International and the Angkasa Pura II Airport Management Excellence Programme of Indonesia are two such initiatives which give airport professionals a sound grounding on the principles and techniques of management and law.

Federal Register Index, 2010 **Federal Register**, 2013-02 **Jane's All the World's Aircraft**, 2009 Aircraft Accident Report United States. National Transportation Safety Board, 2007. On August 27, 2006, about 0606:35 eastern daylight time, Comair flight 5191, a Bombardier CL 600-2B19, N431CA, crashed during takeoff from Blue Grass Airport, Lexington, Kentucky. The flight crew was instructed to take off from runway 22 but instead lined up the airplane on runway 26 and began the takeoff roll. The airplane ran off the end of the runway and impacted the airport perimeter fence, trees, and terrain. The captain, flight attendant, and 47 passengers were killed, and the first officer received serious injuries. The airplane was destroyed by impact forces and post-crash fire. The flight was operating under the provisions of 14 Code of Federal Regulations Part 121 and was en route to Hartsfield Jackson Atlanta International Airport, Atlanta, Georgia. Night visual meteorological conditions prevailed at the time of the accident. The National Transportation Safety Board determines that the probable cause of this accident was the flight crewmembers' failure to use available cues and aids to identify the airplane's location on the airport surface during taxi and their failure to cross-check and verify that the airplane was on the correct runway before takeoff. Contributing to the accident were the flight crew's nonpertinent conversation during taxi, which resulted in a loss of positional awareness, and the Federal Aviation Administration's FAA failure to require that all runway crossings be authorized only by specific air traffic control (ATC) clearances. The safety issues discussed in this report focus on the need for: 1) improved flight deck procedures; 2) the implementation of cockpit moving map displays or cockpit runway alerting systems; 3) improved airport surface marking standards; and 4) ATC policy changes in the areas of taxi and takeoff clearances and task prioritization. Safety recommendations concerning these issues are addressed to the FAA.

High-Lift Aerodynamics Jochen Wild, 2022-02-03. This book presents a detailed look at high lift aerodynamics which deals with the aerodynamic behavior of lift augmentation means from various approaches. After an introductory chapter the book discusses the physical limits of lift generation giving the lift generation potential. It then explains what is needed for an aircraft to fly safely by analyzing the high lift related requirements for certifying an aircraft. Aircraft needs are also analyzed to improve performance during takeoff approach and landing. The book discusses in detail the applied means to increase the lift coefficient by either passive and active high lift systems. It includes slotless and slotted high lift flaps, active and passive vortex generating devices, boundary and circulation control, and powered lift. Describing methods that are used to evaluate and design high lift systems in an aerodynamic sense, the book briefly covers numerical as well as experimental simulation methods. It also includes a chapter on the aerodynamic design of high lift systems.

FEATURES Provides an understanding of the physics of flight during takeoff and landing from aerodynamics to flight performance and from simulation to design.
