applies a novel efficient meta heuristic optimization algorithm called Colliding Bodies Optimization CBO for various optimization problems The first part of the book introduces the concepts and methods involved while the second is devoted to the applications Though optimal design of structures is the main topic two chapters on optimal analysis and applications in constructional management are also included This algorithm is based on one dimensional collisions between bodies with each agent solution being considered as an object or body with mass After a collision of two moving bodies with specified masses and velocities these bodies again separate with new velocities This collision causes the agents to move toward better positions in the search space The main algorithm CBO is internally parameter independent setting it apart from previously developed meta heuristics This algorithm is enhanced ECBO for more efficient applications in the optimal design of structures The algorithms are implemented in standard computer programming languages MATLAB and C and two main codes are provided for ease of use Travel and Tourism in America Today United States.
