The International Criminal Court - An International Criminal World Court? Sarah Babaian, 2018-05-31 This book provides an analysis of whether the International Criminal Court can be regarded as an International Criminal World Court capable of exercising its jurisdiction upon every individual despite the fact that not every State is a Party to the Rome Statute The analysis is based on a twin pillar system which consists of a judicial and an enforcement pillar The judicial pillar is based on the most disputed articles of the Rome Statute its goal is to determine the potential scope of the Court's strength through the application of its jurisdiction regime The enforcement pillar provides an analysis of the cooperation and judicial assistance mechanism pursuant to the Rome Statute's provisions and its practical implementation through States practices The results of the analysis and the lack of an effective enforcement mechanism demonstrate that the ICC cannot in fact be considered a criminal world court In conclusion possible solutions are presented in order to improve the enforcement pillar of the Court so that the tremendous strength of the ICC's judicial pillar and with it the exercise of worldwide jurisdiction can be effectively implemented

The Report: Saudi Arabia 2015 Oxford Business Group, 2015-09-22 While Saudi Arabia's economy remains dominated by its hydrocarbons sector several other sectors have emerged in recent years as key propellers of economic growth The Kingdom's financial services industries have continued to expand steadily despite the liquidity challenges posed by falling oil prices Trade and investment are being treated as key priorities as the government looks to negotiate this altered economic landscape aiming to leverage its large population high per capita income and many sea and air links The country's capital markets sector meanwhile is poised for a period of significant growth on the back of the opening of Tadawul to international investors in 2015 and the raft of regulatory

upgrades implemented as result The domestic insurance industry which remains dominated by the motor and medical segments has enjoyed double digit growth over the past five years in both revenue and net profit Elsewhere the targets outlined in Vision 2030 indicate that a period of greater opportunity and integration is on the horizon for private players operating in core sectors such as health care utilities industry and ICT

Brain Cholinergic Mechanisms Sukumar Vijayaraghavan, Geeta Sharma, 2016-01-22 Much of our understanding of brain physiology has focused on what one might call first order processes These essentially include the primary synaptic mechanisms underlying excitation mainly glutamate and inhibition mainly GABA Our attention has focused on how the balance of excitation and inhibition regulates the timing patterns and extent of information flow across various circuits A lot less is understood regarding second order processes that sculpt and modify these primary interactions One such modulatory transmitter in the brain is acetylcholine ACh The importance of ACh in modulating various behaviors related to learning memory and attention has been recognized over the last four decades as has its involvement in various neurodegenerative and psychiatric disorders However our understanding of the mechanistic bases for these actions is at its infancy at best and much remains to be understood The array of receptor subtypes for nicotinic and muscarinic receptors their different locations and complex signal transduction mechanisms remain a puzzle Transmitter ACh release sites and their relationship to receptor loci are poorly understood Overall we lack a unifying framework for conceptualizing how disparate actions of the transmitter on receptors lead to circuit modulation and eventually influences on cognition By its very nature reports on cholinergic signaling are quite scattered presented in journals across sub disciplines and in the context of the systems they modulate Hence there is need for consolidation of these studies under a single cover that would allow one to compare and contrast the effects of this transmitter across systems and contexts This special issue represents one such compilation The issue addresses cholinergic modulation of defined circuits that lead to specific behaviors and consists of a judicious mixture of review articles and primary papers The articles focus on three aspects of the system 1 Cellular targets of cholinergic signaling 2 Receptor mechanisms 3 Endogenous transmitter distribution and action While no common mechanism emerges that can explain cholinergic actions on brain functions one can postulate that the transmitter system is dynamic modulating the balance of excitation and inhibition in various circuits This modulation sets up timed network oscillations and it is tempting to speculate that these oscillations form a template for better encoding of afferent inputs One can broadly envision the role of the cholinergic system as facilitating processes that allow for more efficient acquisition of learning and engraving of memories Thus understanding the mechanisms underlying tonic and stimulus dependent release of ACh and how it alters firing templates of neuronal networks would be the first step towards elucidating its role in learning and memory This special topics edition provides clues to some of the actions of ACh It is hoped that the articles allow the reader to extract common themes and potential mechanisms of cholinergic regulation that will lead to elucidation of general principles governing the actions of this important neuromodulator
