limitations of time space and matter Learning can now take place on any device in any place and at any time 21st century skills are one of the concepts we use most frequently when talking about innovative education We see that the skills referred to as 21st century skills include cognitive skills such as creative thinking problem solving as well as many different social and emotional skills such as understanding expressing empathy and teamwork Many educators now agree that not only academic knowledge is sufficient but social emotional skills play a role as much as academic knowledge in a person s success and happiness Another accepted fact is the phenomenon of lifelong learning the fact that education does not start at school but does not end at school in fact it is a process that should continue throughout life While accepting all this a subject that is not discussed much how this holistic lifelong learning is possible in a class in the form of 40 minutes lessons and 10 minutes of break While we are designing various kinds of education programs for children to gain all these different skill sets in the classroom do not we actually keep these skills in the easiest way practically away from the environments they will acquire In John Dewey s book Experience and Education 1938 information obtained as detached from real life is depicted as wasted time and effort Most teachers are already aware of this situation For this reason they try to explain math problems and literacy by linking them to children s experiences and lives as much as possible and they do many big and small experiments in social sciences and science lessons Can t we go one step further than this Can t we make learning in life a part of our education system instead of preparing small examples of real life for children With many justified concerns such as assessment security teachers pedagogical infrastructure we miss out on the most important opportunities for education just because they are outside the walls of the school This book aims to open new horizons in the journey of learning beyond the school walls in the world and contribute to the spread of learning in our society In societies where constant change is the norm schools today must prepare students to be successful in environments and contexts that may differ greatly from what we experience today But are we really thinking about the future With contributions from seven continents this book will reveal a snapshot of some of our best thinking for building new education futures Diverse experiences visions and ideas are shared to help spark new thinking among educators and policymakers provoke conversation and facilitate new ideas for meeting human development needs in a rapidly transforming world

The Importance of Being Little Erika Christakis, 2016-02-09 Christakis expertly weaves academic research personal experience and anecdotal evidence into her book a bracing and convincing case that early education has reached a point of crisis her book is a rare thing a serious work of research that also happens to be well written and personal engaging and important Washington Post What kids need from grown ups but aren t getting an impassioned plea for educators and parents to put down the worksheets and flash cards ditch the tired craft projects yes you Thanksgiving Handprint Turkey and exotic vocabulary lessons and double down on one simple word play NPR The New York Times bestseller that provides a bold challenge to the conventional wisdom about early childhood with a pragmatic program to encourage parents and teachers to rethink how and where young children learn best by taking the child s eye view of the learning environment To a four year old watching bulldozers at a construction site or chasing butterflies in flight the world is awash with promise Little children come into the world hardwired to learn in virtually any setting and about any matter Yet in today s preschool and kindergarten classrooms learning has been reduced to scripted lessons and suspect metrics that too often undervalue a child s intelligence while overtaxing the child s growing

brain These mismatched expectations wreak havoc on the family parents fear that if they choose the wrong program their child won't get into the right college But Yale early childhood expert Erika Christakis says our fears are wildly misplaced Our anxiety about preparing and safeguarding our children's future seems to have reached a fever pitch at a time when ironically science gives us more certainty than ever before that young children are exceptionally strong thinkers In her pathbreaking book Christakis explains what it's like to be a young child in America today in a world designed by and for adults where we have confused schooling with learning She offers real life solutions to real life issues with nuance and direction that takes us far beyond the usual prescriptions for fewer tests more play She looks at children's use of language their artistic expressions the way their imaginations grow and how they build deep emotional bonds to stretch the boundaries of their small worlds Rather than clutter their worlds with more and more stuff sometimes the wisest course for us is to learn how to get out of their way Christakis's message is energizing and reassuring young children are inherently powerful and they and their parents will flourish when we learn new ways of restoring the vital early learning environment to one that is best suited to the littlest learners This bold and pragmatic challenge to the conventional wisdom peels back the mystery of childhood revealing a place that's rich with possibility Journal of Developmental Education ,2012 **The British National**
