

5TH GRADE SCIENCE

Solar Systems Objects

The image displays a collection of educational resources for 5th-grade science, specifically focusing on solar system objects. At the top, a large orange banner contains the text "5TH GRADE SCIENCE" and "Solar Systems Objects". Below this, a diagram illustrates the solar system with the sun at the center, surrounded by planets and moons. In the foreground, a laptop screen shows a lesson plan titled "SC.5.E.5.3 Solar System Objects". To the right of the laptop, several worksheets are visible, each titled "Solar System Objects". One worksheet discusses comets, another discusses the Kuiper belt, and a third discusses asteroids. The worksheets include text, images, and a section for the standard "SC.5.E.5.3".

Solar System Objects

Comets

A comet is a chunk of frozen gases, rock, ice, and dust. Comets have long orbits around the sun. When a comet gets close to the sun, it begins to break apart. The gases and dust that escape form a long tail. A comet's tail always points away from the sun.

The Flying Objects

Besides planets, there are many other bodies that orbit the sun. Let's find out about some of them.

Moons

Other moons are very different from Earth's moon. Europa, one of Jupiter's moons, may have a liquid ocean under a layer of ice. Another of Jupiter's moons, Io, has the most active volcanoes of any body in the solar system.

Dwarf Planets

Pluto was once called a planet. But in 2006, it was reclassified as a dwarf planet. Dwarf planets are nearly round bodies whose orbits cross the orbits of other bodies. Most are found in a region of the solar system beyond Neptune's orbit called the Kuiper belt. These objects are far away and hard to study. Quaoar, whose name was discovered in 2002.

Asteroids

Asteroids are rock and iron objects that orbit the sun. Millions of them are found in the wide region between Mars and Jupiter. Asteroids are made up of rock and metal.

Meteoroids

Each day, tons of meteoroids enter Earth's atmosphere. Most meteoroids burn up in Earth's atmosphere, causing a streak of light called a meteor. Meteoroids that reach Earth's surface are called meteorites.
