and the Reorganization of Mathematical Thinking Marcelo C. Borba,Monica E. Villarreal,2005-07-25 As we enter into the 21Century the presence of technology particularly techno science in everyday life is overwhelming Institutions in the modern world are affected by this presence Like Janus the ancient Roman god whose double faced head signified his knowledge of

the present and the future education has always been a two faced enterprise The past establishes goals and methods of Education and the other face tries to capture the future and suggests and proposes new directions of thought and new styles of behavior for the generation which in a few years will take over both routines and societal innovation History tells us that this face of Education has always been sensitive to emerging technologies Technologies of communication and information have been particularly influential in new directions of society in particular of education The transition from orality to writing marked a new role for the teacher From the sole repository of accumulated knowledge the teacher became a guide and interpreter of registered knowledge The emergence of hardware in the form of documents and books initiated a companionship between teacher and hardware It is also remarkable how the emergence of writing strengthened individual memory contrary to the concerns of Thamus when Theuth explained to him the discovery of writing The conservative king was afraid that the new invention would implant forgetfulness in the souls of men
